The Traveller's Sentiments.

Through sunny's heat, and clime a ranger,
With no choice maps I've lain my way.
A lonely, unpatronized, stranger,
To all the stranger's ills a prey.
While sneering thus, my coarse precautions,
My fortune still has been to dash,
Man's hearts and dispositions various;
But gentle woman's ever kind.
Alive to every tender feeling,
To deeds of mercy ever prone;
The wounds of pain and sorrow healing,
Will soft compassion's sweetest tone.
No proud delay, nor dark suspicion,
Stints the free bounty of their heart
They leap not from the red petition,
But cheerful aid at once impart.
Formed in benevolence of nature,
Obliging, modest, gay, and mild,
Woman's the same endearing creature
In country town, or savage wild!
When pierced with thorns, with hunger wasted,
Her friendly hand refreshment gave;
How sweet the content that has tasted!
What cordial in the simple wave!
Her hum'ly books, her words cheering,
Shed comfort on the fainting soul;
Woman's the stranger's general blessing,
From sultry India to the pole.

R.

Conesty, Va. 6th Mo. 1841.

O, Save Yon the Leaf.

O! save yon the leaf at the fall of the year,
When the frost-nip begins its ruthless career!
How softly it wither'd, and its mortal hour drear
As it fell from its bough at the fall of the year
The sun that all summer chose vividly bright,
Then chaste of his beams shed a sickly light;
The frost-spoon fruitful ever minute so blight,
And the leaves of the forest were changed in a night.

So man like the leaf at the fall of the year,
When death pays a step to his varied career;
With breath yet in silence, he sinks to his bier,
Like the leaf that has dropped at the fall of the year

Recollections of a FRENCH MAD-HOUSE BY A MADMAN.

BY LOUIS FITZGERALD TASISTRO.

As I was sauntering along the *Rue Richelieu* about six o'clock in the evening, I was arrested by four robust fellows, who seized me behind. I attempted resistance—I was powerless. In acute pain, and almost choked with anger, what could I do? '*In the King's name!*' Could I withstand such authority as this? I was not delirious, and yet I tried to resist; but, with a couple of jerks, I found myself thrown into a coach which was waiting to receive me.

The drive was long. The men who accompanied me, talked of the beauty of the city, the coolness of the night, and if I but sighed, advised me to call forth my courage and show that I was a man. Who could fancy branch of courage given by a Moschard!" Does a *Moschard* ever come in contact with a man, except to arrest him from behind!

Our progress was slow; and my heart, though horribly tortured by violent passion, had time to become full with another feeling—that of indignation. To be collared by a *Moschard*! What an outrage on a free citizen! The *Moschard*, with our moral existence, is the mere machine of power;—a base cur and, he is the agent of force. No, I am wrong: a *Moschard* is the most courageous of men, for he braves that which all other men dread the most—Public Opinion!

We came at length to our journey's end. I remember the minute circumstances of those heavy and eternal hours which tortured me so horribly. We have so many fibres alive to pain and grief! I thought I was entering the house of a judge of instructions, or a *Procureur du Roi*. I had been led to suppose so on the road, and had been told of daggers, of incendiarism, and murder. I had listened to my conductors like a man who regrets not having done sufficient to testify the rigor inflicted upon him; and when I appealed to my confused recollections, I was almost furious at having possessed command enough over myself to refrain from bursting every cord that attached me to society. Despair, like grief, has its distinct gradations.

Having crossed a small court shaded by a few trees of sad and sombre foliage, I entered a vast spacious ante-room filled by an immense horse-shoe table. At first I supposed it to be the hall in which the question was administered, and with a shudder I looked round for the instruments of torture—I was politely seated.

What a picture was before me. Pain—simplicity—laughter—without gaiety—weeping without tears—one single face of pity, that of Mad. B——d, all this, agglomerated, as it were, in a space scarcely ten feet square. My brain turned—I thought I was dreaming—I wanted to know, yet feared to learn.

I had ample time for observation. The weakness of my body seemed to impart energy to my soul. A little man, round, red, and pimpled, was seated in an arm-chair, looking at me with stupid eyes, and laughing at my cadaverous complexion. How dared he to laugh! I had twice turned away from this face so stupidly ironical, so ignobly sardonic; yet still he ogled me with his oblique grin. I thought it a gross insult, and my fingers of iron were slowly hovering around his neck, when a soft and compassionate voice bade me be seated. The voice of a woman has alone power to calm the workings of my excited soul;—I obeyed,—my ire evaporated, and I listened with tolerable patience to the conclusion of a sonata played on the piano-forte by a female boarder about twenty years of age. Mad. B——d was mad, as I afterwards learned, when not playing upon the piano-forte.

But the *Procureur de Roi* came not, and there was a profound silence in the next room, where, as I supposed, I should be subjected to a painful trial.

"Show the gentleman to his room," said the benevolent fairy to a servant, who had not left my side since my entrance. He led the way;—I followed like an automaton. After treading lower three corridors and ascending an many staircases, I was forcibly thrust into a room whose window was grated with iron bars and latticework of the same metal. A navy bed, two chairs, and a great mattress, composed the furniture of my apartment.

My conductor had been joined by one of his comrades.

"What are you doing? What do you want?" I said.

"We are to watch upon you, sir."

"I want nothing; leave me."

"We are ordered not to leave you, sir."

"Will the *Procureur de Roi* soon come?"

"It will not be long first, sir."

"He will do well to make haste if he wishes to examine me, for I am losing my strength."

I went to bed only half undressed.

"If you please, sir, we have barley-water in that jug."

"Why barley-water?"

"Dr. Blanche ordered it."

"Where am I then?"

"At Dr. Blanche's."

The film fell from my eyes. I thought myself a confessor. I now discovered that I was only a madman.

The Doctor came in. I courageously prepared myself for the prompt-bath; for his language, far from consoling me, fires the little blood that remained in my body. He talked to me of murder, assassination, incendiarism. These were the words fired upon. I thought him mad, and I pitied him—I, whom hope seemed to pity.

All night, a man bellowed in the next room. It was a maniac demanding his liberty. As for me, I contemplated in silent despair, the walls and bars by which I was surrounded. I had a thousand lives for suffering, but not a single hand to strike with.

Dr. Blanche returned. His urgings of reason quieted the effervescence of my ideas, and I thought on more of self-destruction. Wrapped in a brown cloak, a young man of feat and memory stood by my side in deep and sad meditation. The fire of two pistols had been unable to destroy him. Both balls had traversed his upper jaw, and found an outlet between his eyes. Some beings are cruelly persecuted by fate! This unhappy man is still alive!

Another well-dressed individual with a smiling countenance and gracious expression, seated himself next to me, and politely inquired after my health. I knew not what I answered; but he took a violin, and, with remarkable vigor and precision, played variations upon a well-known air. I think I paid him some compliments.—Oh! Oh! replied he, "I have many other talents! I perfectly recollect being Genghis-Khan, Mahomet, and Napoleon. Pray sir, do you remember what you have been? When the brain leaves your skull to pass into another." Mad. Blanche told him to be silent, and he obeyed, laughing.

I had leave to walk in the court and garden. Here I now and stalked; after the describe, because I am now in full possession of my reason. At least I think so.

On the [illegible] of Montmartre, upon a hillock surmounted by [illegible] of several windmills, stands a large [illegible] whose white front, of rather elegant architecture, attracts the looks of the curious. A ground-floor, a first and second story, of fourteen windows each, some with iron bars, others with simple trellis-work, form the front of the mansion. Two small wings, the left of which is inhabited by the Doctor and his family, seem to have been added to the building subsequently to its construction; there is a little venture between the house and iron-railings in front, which space is termed the court.

At the back of the house are also two stories opening upon an English garden, small, but pretty. Sick, idiots, and madmen, walk in it at their pleasure. They whose madness is dangerous, are separated from the others by high wooden palisades, which they can neither pell down nor climb over. On one side is pain, on the other despair;—here, moral suffering is the excess of its poignancy—there, physical pain and mental affliction in their most lamentable form;—bitter tears are shed in the one enclosure—the other displays scenes of a more sombre and more corrosive kind—I should prefer the affliction which annihilates reason!

Each of the rooms I visited, recalls heart-rending hours. In this cell was, and is still confined, a noble Portuguese, whose brother, only twelve years of age, was hanged at Cintadra, as *the accomplice of a plan to overthrow the existing form of Government*. "What shall we do with this child!" said the chief judge to a woman: "he is only twelve years old."

"Twelve years old!" she replied.

"So much the better! Let him be hanged forthwith, he will sup with angels. And let his brother, a little older, witness the execution from the foot of the scaffold."

The woman who thus commanded the cold-blooded murder of a child, was the mother of Don Miguel. The execution took place—and the brother, who witnessed this horrid spectacle, lost his senses. The care and ability of Dr. Blanche restored him to health; but, still pursued by the phantoms of his brother's strangled corpse, he became mad a second time.

Here again is another room connected with historical associations. Surrounded by these bare walls, a heroic female, whom joy had deprived of her senses, spent many a tedious day—many a long, interminably long night. Here, upon this very pallet, did the lively and noble Mad. Lavalette shed many bitter tears of imaginary woe. Sir Robert Wilson, Bruce, and Hutchinson, had rescued her husband from the royal murderer's power. He has done paid his last tribute to nature, not to kingly tyranny—and Mad. Lavalette owes to Dr. Blanche an almost miraculous cure.

There are some other thrilling recollections which I could trace! but the subject has overpowered my senses: a thick, impenetrable film has come over my vision, and I must pause!

Gossip, at a Village Quilting

BY LYDIA JANE PIERSON.

"How beautiful! How mournfully beautiful," said a fair young girl looking from a window along the quiet street. All eyes followed the direction of hers, and rested on an approaching chaise drawn by a grave sleek looking animal, who even seemed to trend lightly as if in consideration of those to whose comfort he was contributing. They were indeed a lovely couple, yet both were evidently invalids, for although it was a mild warm day in the early autumn, and the cabish top of the chaise was thrown back for the benefit of the sun and air, the gentleman was wrapped in a cloak, and a heavy shawl muffled the person of the slender girl. He was a tall fine figure and his features were regularly handsome; his dark locks lay upon his temples like raven's plumes thrown upon a snow wreath, and his large black eyes sparkled as with the reflected light of glorious immortality. His companion sat beside him like a beautiful statue of delicately lilac veined marble. Her soft brown hair lay in light natural ringlets on her neck and shoulders, and her azure eyes seemed overflowing with the tender sensibilities as she conversed with him beside her, and ever as she smiled, the bright rose spot on his cheeks flushed brighter, but her face was pale as the white lily.

"Poor young creature!" sighed a bride of a few weeks when they had fairly passed. "They were to have been married on the same day that united me to Charles, but now their marriage ceremony will be the burial service. 'Tis sad that they should die so soon, with love and happiness in full bloom before them, and they so worthy of life's dearest joys, so beautiful, and good."

"They were always good and beautiful, I have known them from their infancy," observed a fine looking matron who was busily "laying out" the quilt. "I always thought that theirs would be no common lot. They were always together. He was a fine tall boy of his age, and she was sprightly as a fawn, and musical as a wild bird. How often have I heard her sweet songs ringing from cork to rock along the river. They knew the sunny knolls where the earliest violets blossomed, and the shelltered dells in which the last daisies lingered. They never disturbed the bird's nests, but he would climb the tallest trees to get for her a handful of nuts, or a cluster of early ripe grapes.

"They loved every thing that was beautiful, and when weary of climbing the hills, or rambling in the forests, they would sit down in some pretty favorite spot, and while he read aloud, for he always carried some book with him, she would pile her needle at some fancy work, or sketch in a little blank book the surrounding scenery. Some of these wild sketches are wonderfully natural. And then he would coax her to sing some tender little song. Oh they were so gentle and so happy together!

"She was an angel of peace at home, at school, or at play. It seemed as if her loving presence excluded every angry passion. Every body loved her; he was always with her. And so they went on until he was seventeen, when his father sent him away to school. I did expect then that Adela would pine like a benevolent king dove, but she continued to look as sweet and smile as bright as ever. But it was observed that when she sat in their favorite bowers, her songs were wild pensive plaints which we were sure she had herself composed, and this was evidence that her heart was ill at ease. I knew that Edgar never could forget her, but I always thought they would never be married. As the autumn drew on I observed that the delicate rose tint had faded from her cheek, and I mentioned the circumstance to her mother. But she said that Adela's paleness came from lack of her usual exercise, as she seldom went out upon the hills now, although grapes and chestnuts were abundant. I told her that I found the institute of ill health kept her child from rambling, rather than that inactivity made her sick ill. But she laughed at my fears, she could not believe that there was a canker in her fair rose. But she was to blame, for she allowed the girl to sit for hours in the evening air, gazing at the bright worlds floating in the blue ocean of immensity. Edgar came home at the holidays; and then I observed that although her eyes brightened to an unusual lustre in his presence, her cheeks remained cold as snow, a sure sign that the links between soul and body were weakened, and the avenues of communication clogged by disease. The affection of the spirit was bright and strong as ever, but the body felt not the flow of its thrilling tides. Edgar's eyes were quicker than those of maternal love, or it may be that his heart felt the language of her pulses, but he said that death had touched her life strings. He could not be persuaded to the contrary, and he wept over her with a bitterness that blighted life's richest blossoms. He went back to college, but from that time they maintained a regular correspondence. I hope their letters will be preserved, as I am sure they are all worth reading.

"Well Adela continued to droop until all that remained of her former self was expression, the smile, the spirit of the eye, and the music of the voice. Yet she was not, and even now, is not greatly emaciated. People said she was only love sick, and would be well when Edgar came home to live, but I had seen too [illegible] hope that. The strings of her life were attached to Edgar's heart, and they are breaking by their own tension. This is evident from the keenness of all her sensibilities, and the affections that brighten as her life grows dim, and then, she has neither pain, cough, or hectic. At length his term at college expired, and he set out for home on the pinions of impatience. Within a few rods of his father's gate the stage in which he travelled broke down, and although no other passenger received any injury, he contrived a bruised wrist, and had a sprained ankle, before death was apprehended. However, by skillful surgical aid he at length convalesced. During his period of danger Adela was ever near him. She seemed to know neither weariness or weakness until he was thought out of danger, then she was laid on her bed with a delirious fever. But that bedside was free from loathsomeness or terror, and the hallucinations of her mind were beautiful in the extreme. She must have been in heaven then, for for weeks she felt of happiness unknown to earth, and of rapture for earth. Her fever turned at length, and the crisis terminated favorably. We now anticipated her restoration to perfect health, and for awhile she seemed full of joyful hope. But the prospect soon became overcast, Edgar experienced a relapse, and Adela drooped like a broken winged pigeon. He is now in a confirmed consumption, and his intervals of ease are few and brief. She is always with him, and her mother is to come home to-day to relieve and alleviate his pain. 'Tis beautiful to see her thus fondly sustaining her fellow traveller towards the grave. Last spring he was earnest in his wishes that she should be his wife for the little time that remained to them; and although for a time she seemed willing, she at length persuaded him to relinquish the design, pleading that no legal ties could bind their spirits closer, and that their wasting bodies would soon become one mould in the grave. She is on the wing for heaven, and if her sister laments his fate it is not when she is near him, with her sweet voice painting the blessedness of immortality with the light of Jehovah's presence ever filling the soul. And they have not long now to struggle with life."

"Poor young creature!" ejaculated a young mother, as the speaker made a concluding pause; and her eyes rested tenfully on a fair babe that slept upon her lap; "it is sad to die so soon."

"'Tis sadder still," remarked one who was called a poetess, and whose intellectual countenance wore the chastening of sorrow; "it is sadder still to know that all our cherished hopes be crushed around us; it is sadder to remain alone to weep over the grave of our early beloved; it is sadder to walk mournfully day by day over the thorns that remain where the roses of our young affections perished. Methinks 'tis sweet to pass away thus in the bloom and purity of youth and love; ere time the bitter waters of reality have poured their scalding currents on the heart. They will never know the agony of revalued or slighted affection; or the rankling of that passion which is cruel as the grave; they will escape the many pangs of life which are keener than the dart of death, and which strike once and again, and leave the heart alive and writhing. Oh who should withhold those who stand on the threshold of heaven?"

"If my poor George and I could have died in our young happiness, when we were blest with friends, and wealth, and love," murmured a woman who sat by herself at the lower end of the quilt, and whose clean cap and dress were of a quality that denoted poverty; "if we had died then he would not have gone down unhonored to the drunkard's grave; nor should I have lived to toil day and night for that tear steeped bread which merely preserves my despised life—my children starved. Blessed are the dead who die in the Lord, for they rest from their labors."

"Well, after all, life is sweet," cried the buxom wife of a thriving farmer, who though scarce thirty, already numbered eight children. "Surely the old people who sit with their children and grandchildren, surrounded by comforts gathered by their own industry, have no reason to wish they had died young. The Bible everywhere teaches that long life should be considered a blessing."

"The ways of Providence are often wrapped in mystery," observed a solemn looking lady. "He snatches one from the midst of all life's blessings and honors, and suffers another to drag on a long life of suffering and infamy; it is vain to search for his motives, he does as it pleases him, and although his dealings may appear like cruelty, we shall doubtless one day acknowledge that they were just."

"Shall not the Judge of all the earth do right!" quoted a plainly dressed woman, whose placid brow looked as if neither sorrow, care, nor discontent, had place beneath it. "However mysterious his dealing may appear, his children feel that he is supremely merciful. All that we have need of is a living faith! Once possessed of that, we feel that for us to live is Christ, and to die is gain."

At this point of the conversation tea was announced and the quilters adjourned.

Song of the Hours.

We have come from the land of the voiceless things
Pilgrims to earth on our rainbow wings
Oh! would you ought of our being know,
From whence we journey, whither we go.
Mortal! seek all things that vanish soon,
Dew drops that flee are the blaze of noon
The meteor darting on bright and free,
The waves that curl o'er the dark blue sea
A sunbeam dancing above the stream,
Visions, which float o'er a feverish dream
The lightning's flash, ere the storm cloud lowers
—Such, and so fleet are the changing hours.

Some of us ventured in light, pursue
The mystic path that no eye may view
Some colored in the ever-changing dyes
That float at even o'er summer skies
And come in a grey and misty veil
Glide silently on in the starlight pale
Through the quiet night, through the glare of day
Still on we follow, and make no stay
Ye chide our lingering, ye wish us slow,
But heedless, wearifies, on we go.
Oh! many a sigh from earth's fairest bowers,
Is borne on the wings of the passing hours

Ye of the pure heart, and voice of song,
Whose standard hands were not formed for wrong
Of the shadowless brow, and the laughing eye,
Ye bad us in follow, as we fly
But some three-and, and to them we bear
Dark thoughts of the past, of the future, despair
To whom every phrase is such dropping song,
In a shade more deadly than scorpion's sting!
Yet countless blessings we have to shed
In fragrance over the guileless head:
And to some more sweet than the breath of flowers,
Are the memories left by the fleeting hours

The Romance of Heraldry.

Neville's Cross.

Holyrood day was a memorable season for the Nevilles in the olden times. The fair manor of Raby, which the Nevilles held under service from the prior of Durham, then rang with the voice of the lively bugle, and there was not one of Neville's adherents, if he could borrow or steal a steed, that was not in his saddle that morning. It is true that the old ballad which lamented the death of Sir Robert, the great-grandfather of the Neville who is to figure in this tale, was current for several centuries after the event which it celebrated had taken place, and, furthermore, that that ballad said—

"Well, I wis, sal ye hornes blaw
Holy Rode this day;
Nou ye be dede, and I lee law,
Wes wont to blerk them ay!"

but "the hornes" blew, nevertheless, and, if the number of the huntsmen was any criterion, to a very good tune, too.

Such was the case on the morning of Holyrood day, in the year 1349. The prior of Durham, somewhat incensed that he had received no acknowledgment for the four previous years, had sent to the Lord of Raby for his yearly fee, which was a good fat buck with branches; and young Ralph de Neville, though he was rather wanty of bucks, had harnessed himself for the purpose of pleasing for this demand. Reflecting, however, that the strings of her life were attached to Edgar's heart, they are breaking by their own tension. This is evident from the keenness of all her sensibilities, and the affections that brighten as her life grows dim, and then, she has neither pain, cough, or hectic. At length his term at college expired, and he set out for home on the pinions of impatience. Within a few rods of his father's gate the stage in which he travelled broke down, and although no other passenger received any injury, he contrived a bruised wrist, and had a sprained ankle, before death was apprehended. However, by skillful surgical aid he at length convalesced. During his period of danger Adela was ever near him. She seemed to know neither weariness or weakness until he was thought out of danger, then she was laid on her bed with a delirious fever. But that bedside was free from loathsomeness or terror, and the hallucinations of her mind were beautiful in the extreme. She must have been in heaven then, for for weeks she felt of happiness unknown to earth, and of rapture for earth. Her fever turned at length, and the crisis terminated favorably. We now anticipated her restoration to perfect health, and for awhile she seemed full of joyful hope. But the prospect soon became overcast, Edgar experienced a relapse, and Adela drooped like a broken winged pigeon. He is now in a confirmed consumption, and his intervals of ease are few and brief. She is always with him, and her mother is to come home to-day to relieve and alleviate his pain. 'Tis beautiful to see her thus fondly sustaining her fellow traveller towards the grave. Last spring he was earnest in his wishes that she should be his wife for the little time that remained to them; and although for a time she seemed willing, she at length persuaded him to relinquish the design, pleading that no legal ties could bind their spirits closer, and that their wasting bodies would soon become one mould in the grave. She is on the wing for heaven, and if her sister laments his fate it is not when she is near him, with her sweet voice painting the blessedness of immortality with the light of Jehovah's presence ever filling the soul. And they have not long now to struggle with life."

"Poor young creature!" ejaculated a young mother, as the speaker made a concluding pause; and her eyes rested tenfully on a fair babe that slept upon her lap; "it is sad to die so soon."

"'Tis sadder still," remarked one who was called a poetess, and whose intellectual countenance wore the chastening of sorrow; "it is sadder still to know that all our cherished hopes be crushed around us; it is sadder to remain alone to weep over the grave of our early beloved; it is sadder to walk mournfully day by day over the thorns that remain where the roses of our young affections perished. Methinks 'tis sweet to pass away thus in the bloom and purity of youth and love; ere time the bitter waters of reality have poured their scalding currents on the heart. They will never know the agony of revalued or slighted affection; or the rankling of that passion which is cruel as the grave; they will escape the many pangs of life which are keener than the dart of death, and which strike once and again, and leave the heart alive and writhing. Oh who should withhold those who stand on the threshold of heaven?"

"If my poor George and I could have died in our young happiness, when we were blest with friends, and wealth, and love," murmured a woman who sat by herself at the lower end of the quilt, and whose clean cap and dress were of a quality that denoted poverty; "if we had died then he would not have gone down unhonored to the drunkard's grave; nor should I have lived to toil day and night for that tear steeped bread which merely preserves my despised life—my children starved. Blessed are the dead who die in the Lord, for they rest from their labors."

"Well, after all, life is sweet," cried the buxom wife of a thriving farmer, who though scarce thirty, already numbered eight children. "Surely the old people who sit with their children and grandchildren, surrounded by comforts gathered by their own industry, have no reason to wish they had died young. H. P.

"A Moschard is a secret spy of the French Police, generally a condemned thief, he hires upon the community by the pernicious policy of the Prefect of Police, to pry into the secrets of families, and detect crime after suborning others to its commission.

maintained their original lock pace, they were overtaken by some couriers of Lord Percy ere they arrived at Raby, and these persons informed them that a powerful army of Scots had entered England; that Lord Percy, the Lord Warden of the Marches, was retiring on Durham, and that they were hastening to London to communicate these particulars to the Queen Regent.

"I must join his lordship, Ellen," said Ralph, on hearing this intelligence; "but I will make thee lady of my castle before I go, and leave a garrison to defend thee. I can be in my saddle upon my mother hour."

About a week posterior to Ellen's elopement from the monastery, and just as the great bell of that structure was commencing its summons to midnight prayers, a small form of foot wheeled off the main road into the approach to Raby Castle. It was a dark night, and though there was a good look-out in the barbican, they passed beneath the very ramparts of the castle without being discovered. They then came to a halt, and the captain of the party, who had remained in the rear hitherto, advanced to the front to reconnoitre.

"At those sate the garrison is no more than twenty men!" he demanded of one of his followers.

"I am certified on that point, holy sir," replied the person addressed; "and, which is more in our favor, that Sir Ralph himself is with my Lord Percy."

"Do thou and thirty men attempt the north sally-port, then," replied the prior, for he was the captain; "and I and the rest will make for the nearest platform."

The person addressed accordingly led thirty men, which was about half of the force, to the furthermost side of the castle, and the prior marshalled the remainder towards the nearest platform. He discovered this without the least difficulty, and being still free from interruption of any kind, planted his scaling-ladder against the elevation, and led the way to the summit.

All was still,—too still, the prior thought; for not a breath disturbed the air. It seemed that the garrison, if there were any, had retired to their beds, and left the castle to take care of itself; but the prior, nevertheless, continued to act with caution, and advance with as much stealth as at first. The rampart was a few steps higher than the platform, and was defended by a parapet, so that, as it commanded the ballium, or inner court, the prior might be said to possess the castle, if he gained the rampart. He was sensible of this particular, and consequently made for the rampart at once.

He had just brought his men to the scale the parapet, when a heavy chest sabbled his ears; and the next moment the whole of the garrison leaped over it, and before he could recover from the confusion which followed that circumstance, greeted him with a smart volley. He and his men fell back in dismay; but one of them—the lieutenant of the party—availed himself of the cover which the smoke afforded, to spring over the parapet, and while the prior and garrison were engaged in close action, to make his way to the castle. Proceeding at his utmost speed, he soon arrived at the door of the donjon, and there confounded to his expectations, encountered the person whom he sought.

"I am true to my promise, you see, my daughter," he said. "The vassals of Neville have now the advantage of your uncle's vassals."

"Oh! thanks, thanks, holy father!" replied Ellen; for it was she.

"Thank where thou not yet," replied the other. "It is true I have risked my life for you; for the prior would certainly take that an' he knew I had joined myself with his vassals to night, much less that I had betrayed them; but I must do more to save you, my daughter. He has brought a greater force with him than I expected, and your only resource is flight."

"Alas! whither can I flee, father," answered Ellen.

"I will guide you to Sir Ralph's camp," said the other. "Follow my vassals with me."

He did not allow Ellen time to deliberate, but gently seized her by the arm, led her to the nearest outlet from the castle, and thence struck off into the park.

It was, as has already been said, a dark night; and this circumstance, though it favored her flight, tended to increase those fears which it was natural that Ellen should entertain. The prospect, however, of again beholding her husband—of once more the night call him, emboldened her somewhat, and she kept up very well for about a mile. When that distance had been traversed, however, they entered a wood, and the gloom of the scene so terrified her that she was forced to cling to the arm of her guide for support.

"Ah," that person said, in a sentimental tone, "now that thou make a paradise of this place, my daughter."

Ellen involuntarily relaxed her clasp of his arm.

"Wherefore dost thou loose thy hold!" demanded her guide, impatiently. "Wherefore!"

He grasped her tightly round the waist as he spoke, and attempted to kiss her.

"For God's sake, father, hold!" screamed Ellen. "Help! help!"

Vain as she knew it was, she would have continued to cry for help, but her assailant, having succeeded in drawing her hands behind her with his right hand, forced his left over her mouth, and stifled her utterance. Ellen, however, did not forbear her resistance, but having summoned all her strength for one desperate effort, endeavored to free her right hand. After a deadly struggle she achieved her object, and, though her hand was numbed with pain, caught a firm hold of a dagger which she wore, and made a blow at the ruffian's side. He eluded the blow, however, and adroitly skipping round her, again seized her arm, and wrenched her dagger from her hand. Ellen now became quite mad with horror, and screamed and struggled so desperately that her assailant was half inclined to desist. Before he made up his mind, on the matter, however, he heard voices and footsteps approaching, and these quickly induced him to take flight. He accordingly dropped his hold of Ellen, and leaving her to the care of whomsoever should arrive first, broke in among the trees.

Though she retained her feet, Ellen was senseless for a moment after his retreat; then she reeled forward to meet the party who had so unexpectedly come to her rescue; and on coming up with them, which she did in an instant, fell into the arms of the foremost.

"We have won the lady, though we lost the castle," cried that person, after surveying her a minute:—Ha! ha! ha!"

It was broad and bright day when Ellen awoke; but she did not know that many bright days—at least a fortnight—had intervened since she was last awake. She soon learned it though, and every other particular of her situation; but what grieved her more than any thing—oh! how much more!—was the tidings of the death of Ralph de Neville. She now needed little persuasion to induce her to take the veil, and so the abbess of the convent in which her uncle had placed her duly furnished that little, as she told her him and it was for a broken heart and a sorrowing spirit to be tossing about in the stormy and cold-hearted world; as she painted in their brightest colors (how gloomy were they!) the serene pleasures which the retirement of a convent afforded, and wondered how any thought such soul could live in the world, Ellen eventually became convinced that a conventual life was indeed a grateful one, and consented to take the veil.

Dispensing with the year of noviciate, the abbess fixed the next day for the performance of the ceremony, and Ellen, who was careless whether it was the next or that day, acquiesced. The next day accordingly was fixed upon, and all the usual preparations—such as the decoration of the altar, the strewing of the floor, the illumination of the shrine,—were commenced forthwith.

It was a fair and beautiful morning, and though the sun, which looked like a ball, round the door through the deal window, could scarcely be distinguished in the chapel, there was a bright spot on Ellen's cheeks which seemed to mirror his splendor. There was a tremor over her bosom, too—not a heaving—which was equally sad and beautiful, but she advanced to the altar with a firm step notwithstanding. A chor of sisters assisted her to kneel before the altar; the canticle of "*Gemiscat, Genitiquus*," sung through the chapel; two of the oldest sisters, as she knelt down, raised their hands to cop her hair; and the abbess, preparatory to making her the bride of Heaven, was about to place the ring on her finger, when the tramp of a large party of horse was heard approaching. The next moment, a loud flourish of trumpets, and a shout of "Queen Philippa to the rescue!" interrupted the ceremony.

On the morning that Ellen was to take the veil, the western side of the city of Durham was the theater of a far different scene. On one side of a spacious valley, the army of David Bruce was drawn up; and on the other, covering the city of Durham, that of Philippa, the Queen-Regent of England, had taken its stand. King Edward, the husband of Philippa, was pursuing his conquests in France; but though the greater part of her force was hasty and undisciplined levies, that illustrious princess did not hesitate to take the field herself, and by the example of her own high bearing, to arouse the chivalry of England to fight for England's right. With this view she had achieved a forced march from the south to the north of the kingdom, and having effected a junction with the troops under Lord Percy, led her army in person into the field. She herself animated the centre of her array, Lord Percy commanded the right, and Prince Lionel the left wing, and Ralph de Neville and his vassals, being deemed the flower of the army, were to act as that person might see occasion.

Such was the disposition of the English when the two armies joined battle. They fought with varying success for about two hours; but the English centre, where Queen Philippa was, then began to break a little. Before the Scots gained any decided advantage, however, Ralph de Neville poured down to the succor of the Queen; and the English leaped by the prior, which, rallying their troops, charged the Scots with such impetuosity that the scale was turned immediately. Having thus accomplished his object, Ralph de Neville turned to harass the left wing of the enemy. As he was proceeding thither, he perceived their reserve column, of which King David himself was the commander bearing down on Prince Lionel, and he wheeled about to intercept them. Disconcerted at the departure of the Scots, however, he sought to effect his purpose in an indirect manner, and he therefore filed into a tune, which afforded a sort of cover to his advance. In this manner he passed on till he came to what is called a cusses in topography, being the junction of four roads, and there as he had foreseen, he came up with the enemy. The latter were formed in column, and De Neville, having deployed into an open line, took advantage of their order to put his light horse into their rear. At the same moment, Lord Percy broke up the left wing of their main line; and Queen Philippa, making a bold push through their centre, advanced to the succor of De Neville.

The result of these several manœuvres was apparent in a moment. Giving a loud shout for Queen Philippa and De Neville, the divisions of those two persons, under the direction of De Neville, made an impetuous charge on the Scottish line, and put it to the route straightway. King David and the chief of his nobles, disdaining to flee, were taken prisoners; the greater part of their force threw down their arms, and the rest took to flight. De Neville was about to pursue them, but ere he could realize his purpose, a horseman bore up to him with tidings that drove it from his mind.

"Oh! thanks, thanks, holy father!" replied Ellen; for it was she.

"Thank where thou not yet," replied the other. "It is true I have risked my life for you; for the prior would certainly take that an' he knew I had joined myself with his vassals to night, much less that I had betrayed them; but I must do more to save you, my daughter. He has brought a greater force with him than I expected, and your only resource is flight."

"Alas! whither can I flee, father," answered Ellen.

"I will guide you to Sir Ralph's camp," said the other. "Follow my vassals with me."

He did not allow Ellen time to deliberate, but gently seized her by the arm, led her to the nearest outlet from the castle, and thence struck off into the park.

It was, as has already been said, a dark night; and this circumstance, though it favored her flight, tended to increase those fears which it was natural that Ellen should entertain. The prospect, however, of again beholding her husband—of once more the night call him, emboldened her somewhat, and she kept up very well for about a mile. When that distance had been traversed, however, they entered a wood, and the gloom of the scene so terrified her that she was forced to cling to the arm of her guide for support.

"Ah," that person said, in a sentimental tone, "now that thou make a paradise of this place, my daughter."

Ellen involuntarily relaxed her clasp of his arm.

"Wherefore dost thou loose thy hold!" demanded her guide, impatiently. "Wherefore!"

He grasped her tightly round the waist as he spoke, and attempted to kiss her.

"For God's sake, father, hold!" screamed Ellen. "Help! help!"

Vain as she knew it was, she would have continued to cry for help, but her assailant, having succeeded in drawing her hands behind her with his right hand, forced his left over her mouth, and stifled her utterance. Ellen, however, did not forbear her resistance, but having summoned all her strength for one desperate effort, endeavored to free her right hand. After a deadly struggle she achieved her object, and, though her hand was numbed with pain, caught a firm hold of a dagger which she wore, and made a blow at the ruffian's side. He eluded the blow, however, and adroitly skipping round her, again seized her arm, and wrenched her dagger from her hand. Ellen now became quite mad with horror, and screamed and struggled so desperately that her assailant was half inclined to desist. Before he made up his mind, on the matter, however, he heard voices and footsteps approaching, and these quickly induced him to take flight. He accordingly dropped his hold of Ellen, and leaving her to the care of whomsoever should arrive first, broke in among the trees.

Though she retained her feet, Ellen was senseless for a moment after his retreat; then she reeled forward to meet the party who had so unexpectedly come to her rescue; and on coming up with them, which she did in an instant, fell into the arms of the foremost.

"We have won the lady, though we lost the castle," cried that person, after surveying her a minute:—Ha! ha! ha!"

It was broad and bright day when Ellen awoke; but she did not know that many bright days—at least a fortnight—had intervened since she was last awake. She soon learned it though, and every other particular of her situation; but what grieved her more than any thing—oh! how much more!—was the tidings of the death of Ralph de Neville. She now needed little persuasion to induce her to take the veil, and so the abbess of the convent in which her uncle had placed her duly furnished that little, as she told her him and it was for a broken heart and a sorrowing spirit to be tossing about in the stormy and cold-hearted world; as she painted in their brightest colors (how gloomy were they!) the serene pleasures which the retirement of a convent afforded, and wondered how any thought such soul could live in the world, Ellen eventually became convinced that a conventual life was indeed a grateful one, and consented to take the veil.

Dispensing with the year of noviciate, the abbess fixed the next day for the performance of the ceremony, and Ellen, who was careless whether it was the next or that day, ac

Truly all the age wild, jealous, presumptuous, without religion! All men they call it, are breaking their yokes, casting their cords, casting selfishly other gods off, Mammon. The blind contends are breaking all bounds. The great, who should be leaders, are crying, Let us be free! The lesser, who should be the people, are crying, Let us be free! Under the name of freedom, anarchy, madness, prospers in abundance, and the ancient, divine, beneficent order of things, which only imparted true freedom, shall not be shown of not a few; and it is right this should come to prosperous as well as happy. But it is the true office of fear to prove true destroyer to blessedness, impossible to dull or destroy it. To despair of the time, even in the worst times, is unmanly—unchristian. How much more so in times like these! What I must lament in these apparitions, is the utter distrust of human nature which they discover. Its higher powers are thought only to be restrained. They are thought to be safe only when in fetters. To me there is an approach to impiety in thinking so meanly of God's greatest work. Human nature is not a viper which needs a constant chain. In this case it is the chain which makes the viper. It is the rapacious who has made man fit only for the yoke.—*Dr. Channing.*

SATURDAY POST.

PUBLISHED AND PUBLISHED BY

GEORGE R. GRAHAM & CO.

SATURDAY, NOVEMBER 13.

Acknowledgment.

We give our thanks to a large number of the subscribers of the Post, for the very handsome manner in which remittances have been made to us, for some time past, and for the quality of the funds, in which they have been made. We shall endeavor on our part to do justice to them in turn.

A word to those still in arrears. We shall be much obliged for a speedy settlement, as the volume is now opened, and we wish to start, unencumbered by back accounts. Let the accounts all be settled up, and we will take a *fair* start together and see who shall first tire in the race. *We shall continue to favor a splendid paper.*

☞ Samuel Arnold, now of Bucks County, Pennsylvania, is not now, nor has he ever been, an agent of the present proprietors of the Saturday Evening Post, consequently his receipts are not valid. We gave a similar notice in November, 1839.

To Correspondents.

"THE BLIND WARRIOR," certainly. Many thanks to our fair correspondent. Her communication shall appear in next week's Post. "*Ish dieu.*"

"THE ROMAN SONS OF TRIUMPH" is on file for insertion, and shall appear soon.

"ON WHILE EYES I ROAM" is under consideration.

"LORNE" by S. R. are given out. We like to welcome such an old friend.

"MUSIC" is well written. Look for it soon.

We have received several answers to various charades, enigmas, &c. but they generally come to hand after our publication of the answer. Our correspondents will therefore understand why their communications have not appeared.

"THE FAREWELL" is laid over for consideration. Our chief objection to it is the length of the verses.

"THE FATE OF GENIUS" may perhaps appear at an early day. Its extreme length will make its advent substantial to discommode.

"S. H. B's" communication is on file, and shall shortly be given to our readers.

"THE SOUVEN" of T. J. P. is accepted. The cruel fate of the columns of the Magazine forbids us to promise when the article shall appear.

Animal Magnetism.

If there are periodical seasons for epidemics, there are periodical seasons for jugglers. If the world gets at stand periods too crowded and requires the interposition of wars and pestilences to carry off its excess, so the public mind appears at times to become wearied out with things that are commonplace and stale in the aid of magic, or some other wonder to relieve it. During the last thirty years we have had a succession of these "strange sciences" forming a catalogue almost as long, and quite as ridiculous, as that of the British Kings before the landing of Cæsar. One wonder has come and gone only to be succeeded by another, like the shadowy figures that we are shifting through a magic lantern.

Of these "strange sciences" mesmerism, or Animal Magnetism, is the newest and strange. Its professors throng our cities; its believers gape in all our exhibition rooms. The expounders of this noble discovery profess to be actuated only by the most disinterested motives, but always take care to empty the pockets of their visitors. But "*vice is humbug.*" If the brokers on are financial, it is because they submit to it. Who would not make money on the same terms?

A theme such a few brief lines on this subject a fortnight hence, and now return to it to discuss it forever. Whether a subject can be thrown into what is called a magnetic sleep we do not at present intend to enquire, further than to say that the term magnetic "smells rank" of cant—and that, admitting that manipulation, *&c. has any effect* on a person, it is plain, from the experiments yet forth by the mesmerists, that such an effect is produced only on nervous subjects, and that the result is not always the same. For instance, one person is put into what is perhaps a catalepic sleep, another person is entirely affected about the face, and yet another person is acted on solely in one limb. Now—granting that there is no collusion in these experiments—it is not evident, that the much talked of results, are merely affections of the nervous system produced by manipulating? How often do we see persons affected, now to convulsive laughter, now to a tremor of the whole system, and now almost to the penalty of the physical system, by the motion of a hand, as if about to tickle the subject, and yet without touching the person thus operated on? What is there new in this? And yet call it magnetism, and lo! it becomes a wonder.

That a person, in a magnetic slumber, can read with the eyes bandaged, or discern things held behind the back, is disproved by every experiment made under circumstances on which we have recently fully dwelt. Not satisfied with what has occurred in America we have looked through some of the foreign journals for information on this point, and we gather from them universally that all real experiments in mesmerism have proved failures. No subjects be they even magnetized from top to toe—has the power of seeing with the eyes bandaged, and describing scenes with accuracy a dozen squares off. We learn from the London Lancet, that M. Burdin, some time since, offered a prize of three thousand francs to any Mesmerist who should produce a somnambulist, capable of reading with the eyes bandaged. The time fixed for the achievement of this feat was three years, which have recently expired, and not a single individual was found within that period, able to read, even through a thin sheet of paper.—Some time since, a gentleman named *Frappart*, made a considerable noise in Paris, with his experiments on Animal Magnetism, and challenged M. Gerdy to be a witness of his pupil's performances. The lady, M'lle. Pigeaire played at cards, and said with her eyes bandaged. The eyes were covered with a cotton bandage, a pad of cotton wool, and a band of black velvet, fixed to the skin with strips of court plaster. When somnambulism was induced, the young lady complained of uneasiness and pain in her head, raised and depressed her eyebrows violently, struck her head with her hand, and led Gerdy to suppose that the bandages were displaced before the vision was affected, particularly as she always directed her eyes towards the object, and saw only when her head was turned in a particular direction.

It is stated further, that M. Gerdy commenced subsequently to have some Mesmeric Experiments performed at his own residence. Callyste (the patient) was Mesmerized, and M. Gerdy applied the bandage, which was speedily by the contractions of the muscles of the eyebrows and face rendered very loose. M. Gerdy replaced it—and Gerdy she displaced it several times. At last the somnambulist in her deep sleep, said he should never see if he were disturbed every instant. He attempted to play at cards—failed, and here off the bandage in an ill humor.

Still another trial took place, but with like success—and the editor of the Lancet remarks that "it there be any faith who delight in the tricks of professors of the Mesmeric art, and who really believe that the results of certain passings and manipulations are not tricks, we can only say that we hope no desire to interfere with the enjoyment of such pastime."

So much for the professional opinion of men not only capable of judging rightly of the subject, but carrying on their experiments with a determination of learning the truth.

The experiments at the Masonic Hall, in this city, it is proper to add, have made some converts, but have generally resulted in failure. Mr. Johnson, however, could not be induced to submit to the ordeal of a public exhibition, but he does not always succeed in escaping his subjects. The proper method is to enclose the art on persons chosen indiscriminately from the crowd and not on a member of the operator's family. In no other manner can a listener expect to gain conclusive evidence.

Hunter's Lodgers.

The London papers have discovered a regular court's nest. The Morning Herald gives a full account of the lodgers, under the above title, which it states has been derived from an authentic source. It says, "we understand from well informed sources that at least thirty thousand are enrolled in the different lodges. We question whether it would be safe for the Queen to visit the Capital at Windsor—we mean to be a direct reply, they between the members of Chartists, so that the Queen dared Sir Chas. Napier to be ready to pay the Royal Guards, and Sir Chas. Napier is quite indifferent to that Station has 69 lodges; Vermont, 107; New York, 223; Middlesex, 84; New Hampshire, 70; Wiltshire, 71; Illinois, 21; Indiana, 14; Ohio, 56; Pennsylvania, 49; Kentucky, 11; Virginia, 21; Maryland, 16; Delaware, 2; New Jersey, 17; Missouri, 30; Iowa, 3; Louisiana, 11; Lower Canada, nearly the whole population are organized in lodges; Upper Canada, 64. There are a few lodges in New Brunswick, and a few scattered in other parts. The number of lodges in the States not mentioned, may amount to about 140.

The following is the oath administered to each member:

"I swear to do my utmost to promote republican institutions and ideas throughout the world, to cherish them, to defend them, and especially to devote myself to the propagation, protection and defence of these institutions in North America. I pledge my life, my property, and my honor to the cause. I bind myself to its interests, and I promise, until death, that I will attack, combat, and help to destroy, by all means that my adversary may think proper, every power or authorities of royal origin upon this continent, and especially never to rest till the British tyrants cease to have any predominance or foothold whatever in North America, so help me God."

The above is pretty fair for the "most enlightened nation on earth," but the cream of the absurdity is contained in the annexed extract.

"We invest this day, a continuation of the article on the Hunter's Association in North America. It will at once be seen that it is drawn up by one who is well acquainted with the subject on which he writes. We regret to perceive that he more than insinuates that the head of the Association is Mr. CALEB CUSHING, Chairman of the Committee of Foreign Affairs of Congress; and other distinguished men in the United States are mentioned as connected with this body."

Among others, charged with being engaged in these lodges, we find the names of Mr. Smith, of St. Albans, Vt.; Gov. Fairfield, of Maine; Gov. Mason, of Michigan, and Lieut. Gov. Bradish, of New York.

The Right of Search.

A correspondence between Mr. Stevenson and Lord Palmerston has been published in some of the London papers. It relates to the seizure of vessels sailing under the American flag, on the charge of being slavers. In one of his latest letters, Lord Palmerston says:

"With reference to the supposition of the writer of the paper which you have sent me, that British cruisers obtain from taking vessels before they have slaves on board, in order that, by capturing such vessels after they have taken their slaves on board, the captors may get prize money, I have to explain to you, that it is only since the passing of the act of 1839, that there has existed any legal authority to condemn Portuguese ships, detained for being equipped for slave trade, and not having slaves actually on board; and therefore, until that act came into operation on the coast of Africa, her Majesty's vessels could not detain Portuguese slave vessels until they had actually taken their slaves on board; but with regard to Spanish vessels, the treaty of 1835 between Great Britain and Spain, gave to the mixed British and Spanish commission a power to condemn Spanish vessels under the Spanish flag, if found equipped for the slave trade, even though they might have no slaves actually on board; and during the period which has elapsed since that treaty has been in operation, her Majesty's cruisers have taken, and sent in for adjudication, eighty-five Spanish slavers without slaves on board, and since the year 1825 her Majesty's cruisers on the coast of Africa have detained and sent in for adjudication fourteen Brazilian vessels without slaves on board, and only two with slaves on board.

You will see, therefore, from these facts, that the writer of the paper in question is entirely mistaken in supposing that the British cruisers on the coast of Africa look to profit instead of the performance of their duty; and I have further to state, in proof of the zealous activity of the British cruisers, that all the slave vessels sent in for adjudication before any of the actual cruisers, whether in Africa, the West Indies, or in Brazil, have been detained and sent in by British cruisers, not one of those vessels having been detained by the cruisers or any of the other contracting parties to the treaties under the stipulations of which those slave vessels were condemned."

British Power in India.

Mr. Lester, in his recently published work, entitled "The Glory and the Shame of England"—devotes a chapter to the origin, growth and abuse of British power, in the possession of the East India Company. He states that 240 years ago, Elizabeth granted to a company of English merchants, an exclusive right to the commerce of India for 15 years. That the privileges of the Company have been successively renewed, until they now embrace an empire of 1,500,000 square miles, containing 150,000,000 of subjects. The native army of the Company comprises about 230,000 infantry and 20,000 cavalry, while about 5000 troops are levied in Europe, aided by 20,000 of the Queen's regular army. Mr. Lester affirms that the entire population of this vast empire, are subjected to the most degrading servitude. Millions of them, it is estimated, are held in the most cruel bondage, while a vastly greater number are, in different forms, subject to the condition of abject vassalage. He affirms that in the consequence of the system practiced, millions of the people of India have been starved to death. Dr. Bowring is quoted as having said at a public meeting in London, that while India possessed boundless tracts of land with every shade of climate fit for the best productions of the earth—yet men were perishing by thousands and hundreds of thousands from famine, while the stamp issues of the East India Company were filled with blood wrung from this soil by a standing army. He says that in 1837, a famine in India swept off 500,000 people; and that it was brought on chiefly by robbing the population of the produce of their soil, to fill the coffers of the East India Company. It is added, that multitudes starve to death every year in India, because of the terribly oppressive land tax—and that during the famines, unwounded multitudes sell themselves and their children into slavery, for bread to prevent their dying by starvation. The Duke of Wellington is quoted as having said, that he knew that in the last of every Mussulman soldier in the Indian army, is a female slave who accompanies him in all his marches. This is a strong picture, and although doubtless highly colored, it may well be placed among the list of evils which go to make up the "Shame of England."

Extraordinary Occurrence.

The following relation appears in the *Sentinelle* of Toulon, on the authority of a letter from Algiers.—"A lady of Algiers, who some time ago heard one of her children, recently obtained permission from the municipal authorities to have the grave and coffin opened for the purpose of placing in the latter a still-born infant. The coffin was found to be entirely empty, and on enquiry being set on foot as to the cause of the disappearance of the remains of the first child, it was ascertained that the grave-digger, who is the owner of an immense number of pigs, and who supplies most of the pork butchers of Algiers, fed his pigs with the corpses which he buried! In his house were large quantities of human flesh chopped up, and on examining the graves in the cemetery, every coffin was found empty. A discovery was also made in the house of the grave-digger, of jewelry to the value of about fifty thousand francs, which had been buried with the bodies. The criminal is arrested and the prosecution is going on; but, what a dreadful reflection it is for many persons to think that they have been eating pork fed with the flesh of their own relatives! The use of pork has been interdicted for some time, and all the grave-digger's pigs have, by order of the Procureur-General, been killed and instantly buried."

The Franking Privilege.

No privilege, granting for one ends, was ever more generally abused than is the "franking privilege." Members of Congress have been known to authorize others to frank *in their name*, because they could not furnish franks fast enough! Mr. Pitt, in his Report on the Post Office, says that the actual number of franked packages sent from the Post Office in Washington City during the month ending July 8, 1840, was 201,344! The whole number sent during the session of Congress preceding that date amounted to the enormous quantity of 4,214,945! All these packages were not only carried by the Department into every section of the country, *free of postage*, but it was actually obliged to pay to every Postmaster, whose commissions do not amount to $2000, two cents for the delivery of each of these packages! If all the above were delivered, in addition to the price of transportation, the Government would lose of its revenue about $85,000! In addition to this, there are about 13,500 Postmasters in the Union, each one of whom is entitled to frank as many letters as he chooses. Now, if each Postmaster averages one each day, the number would be five millions annually; which the Government not only transports free, but which it pays $150,500 annually to Postmasters for delivering!

Shilons' Characters.

The following extract from the Hon. Mr. Lester's account of an interview with Philetus, will show that the characters of the great novelists are not mere fictions.

"I happened to meet Mr. Lester, of Ala, accompanying his wife, children, and negroes, on their journey to the South-West. Mr. Lester is a man of great wealth, and a prominent member of the Alabama Legislature. I could not resist the temptation of making a few inquiries of him, as I had read the "Shilons" and the "Sut Lovingoods" of the celebrated Dorcas, without but the author. I found Mr. Lester to be the identical Sut Lovingood himself, and his wife the identical Betsy Quigley, the good Christian Presbyterian, and interrupting Quigley, the good Christian Presbyterian, the mischievous Pagan, and dear little Nancy, are many fancies!"

"No, sir, they are not," he replied; "they are copies. You will not understand me to say, of course, that they are true histories in all respects, but they are real histories; nor have I the help of my words exaggerated any thing more than to average my story as well as I could, and give a true picture of course I have witnessed. My past history and parentage have led me to a familiar acquaintance with numerous instances of extreme wretchedness and of deep-laid villainy. In the homes of squalid poverty I have found many a broken heart buried from this world. Many such persons, now in the most abject condition, have seen better days. Once they moved in circles of friendship and affluence. Soon which they have been hurled by misfortune to the lowest depths of want and sorrow. This class of persons is very large.

"Then there are thousands in our parish workhouses and in the lanes of London, born into the world without a friend except God and a dying mother. Many, too, who in circumstances of trial have yielded to impulses of passion, and by one fatal step fallen beyond recovery. Look in crowded cities, and, indeed, as it all England, which the poor, the unfortunate, and the guilty. This description of persons has been generally overlooked by authors. They have had none to care for them, and have fled from the public gaze to some dark habitation of this great city, to curse the cold charities of a selfish world, and die. There are more broken hearts in London than in any other place in the world. The amount of crime, starvation, nakedness, and misery of every sort in the metropolis surpasses all calculation. I thought I could render some service to humanity by bringing these scenes before the minds of those who, from never having witnessed them, suppose they cannot exist. In this effort I have not been wholly unsuccessful; and there is nothing makes me happier than to think, that, by some of my representations, I have increased the stock of human cheerfulness, and, by others, the stock of human sympathy. I think it makes the heart better to seek out the suffering and relieve them. I have spent many days and nights in the most wretched districts of the metropolis, studying the history of the human heart. There we must go to find it. In high circles we see every thing but the real character. We must go to the hovels of the poor and the unfortunate, where trial brings out the character. I have in these rambles seen many exhibitions of generous affection and heroic fortitude, which I could not bring to my sphere. Often have I pleasured minds that only wanted a little of the sunshine of prosperity to develop the choicest endowments of Heaven. I think I never return to my home after these adventures without being made a nobler and a better man. In describing these characters I aim no higher then to feel in writing as they seemed to feel themselves. I am persuaded that I have succeeded just in proportion as I have cultivated a familiarity with the minds and sorrows of the poor, and have entered just in proportion as I have cultivated a familiarity with the minds and sorrows of the poor, and told their story as they would have related it themselves."

Such a writer is one of "God's noblest works," and deserves far, far more of mankind, than the hypocritical sentimentalists who write of what they never feel, or who like Byron, "whine over a dead ass," when they should be relieving a living parent.

State Expenditures.

A late number of the Boston Post gives the following estimate of the State Debts. As this is a subject on which we have often spoken, we copy the table in full. It will be seen that the large States are in debt, out of all proportion to the smaller ones.

	State and State Debt	Deficiency to provide for
Maine,	$1,879,367	37,940
Massachusetts,	7,872,839	1,922,339
New York,	20,165,000	
New Jersey,	82,283	
Pennsylvania,	37,723,000	1,173,519
Maryland,	15,109,000	600,000
Virginia,	6,857,000	
South Carolina,	3,764,000	
Georgia,	500,000	
Alabama,	10,859,556	
Mississippi,	12,400,000	393,000
Louisiana,	20,565,000	900,000
Tennessee,	1,789,166	
Kentucky,	4,965,000	
Ohio,	14,800,000	348,954
Indiana,	13,667,833	734,000
Illinois,	13,263,692	728,430
Missouri,	2,987,557	
Michigan,	6,011,000	460,000
Arkansas,	2,755,382	
Florida,	3,900,000	
District of Columbia,	1,500,000	
Total,	$200,491,157	

To this State indebtedness of $200,491,157, add the surplus revenue deposited with the States $28,101,644; City debts of New York, Boston, Philadelphia, Baltimore, Albany, Troy, Cincinnati, New Orleans, Mobile, and Charleston, a total of $23,372,441; and we shall have, as the total of State and City debts, $250,965,142.

The States that owe no debts are New Hampshire, Vermont, Connecticut, Rhode Island, North Carolina, and Delaware.

The York and Boston.

The Western Trade of New York is about to assume a new channel. The railroad from Boston to Albany direct will be completed the entire distance in three weeks. Soon after that time, the navigation of the Hudson will become uncertain and the Boats will in part suspend their trips between the two cities. Heretofore, a perfect embargo has been laid upon all business, of a heavy nature, after the river closed. Thousands of barrels of flour, and other kinds of western produce, have accumulated in the store-houses of Albany, from inability to reach the Atlantic market. This will no longer be the case. The moment navigation ceases, or before that time, the long trains of cars, led on through lofty mountains and over deep ravines, will be making their daily trips between Albany and Boston. In spite of wind or tide, sunshine or tempests, this daily communication will be kept up and the produce of the West will find a ready market at all seasons, an unusable market. This "Iron River" will not be affected by droughts or floods, or the exigencies of the seasons. It connects at Albany with a continuous railroad to Buffalo, thus uniting Boston with the most fertile and extended portion of the western world. Boston, during the winter, will carry on an exclusive trade with that portion of the West, with which New York has heretofore enjoyed the sole traffic. Her merchants will supply their wants, and in return, she will accept the products of western fertility as compensation. When trade once is diverted from old into new and successful channels, it is no easy matter to regain it. Between New York and Boston, there will now be a rivalry for trade, which the "commercial emporium," with her strength and dimensions, has been accustomed to speak of vaunningly, as of no account, mere child's play. It will now require all her resources to be active and her energies to be put forth with more than ordinary zeal, not merely to gain new business, but to retain her accustomed trade.

Fungus Vegetation in Wine Cellars.

In the wine vaults of the London Docks this kind of vinous fungi hangs like dark woolly clouds from the roof, completely obscuring the brick arches from observation. On a small piece being torn off and applied to the flame of a candle, it burns like a piece of tinder. Should wine escape from a cask in a moist and ill-ventilated cellar, it will altogether resolve into fungi of a substantial kind. A circumstance of this kind once came under the notice of Sir Joseph Banks. Having a cask of wine rather too sweet for immediate use, he ordered that it should be placed in a cellar to ripen. At the end of three years he ordered his butler to ascertain the state of the wine; when, on attempting to open the cellar door, he could not effect it, in consequence of some powerful obstacle. The door was therefore cut down, when the cellar was found to be completely filled with a firm fungus vegetable production, so substantial as to require an axe for its removal. This appeared to have grown from, or to have been nourished by, the decomposed particles of the wine, the cask being empty, and bursyed up to the ceiling, where it was supported by the surface of the fungus.

Ventilation.

We see a plan for ventilating houses in warm weather, suggested in the New York Mechanic. On opening the cupola in the roof of a house, a draft upwards through the house is very sensibly perceived. This fact has suggested the idea of constructing a roof on the plan of venetian blinds so that nearly the whole of it may be easily opened, when desired—thus creating a current of air from the doors and windows below, upwards. If this could be done, nothing at the same time the best strong and arranged to close tightly, it would be a great improvement in the art of ventilation.

The Fever in New Orleans.

A letter to the Commercial Advertiser gives a graphic picture of the ravages of the yellow fever in N. Orleans. He says—the yellow fever, death God, has taken its journey out, however, without having taken leave of us in doubtful scenes which will long be remembered as having transpired in and after the year of 1841 one of the most malignant on record.

In order to show the reader more conclusively the totality of the epidemic during the past season, I have taken the trouble to sum up the total mortality, since the outbreak of the fever, commencing on the 1st of August, and ending yesterday, which comprises a period of twelve weeks and five days. The result is as follows:—

	Total.	Yellow Fever.
1st week	57	5
2d "	69	4
3d "	103	23
4th "	148	72
5th "	174	105
6th "	245	164
7th "	309	220
8th "	397	259
9th "	256	160
10th "	184	145
11th "	131	93
12th "	149	93
13th "	76	37
	2045	1379
Buried at Lafayette from N. Orleans, estimated,	450	350
	2495	1729

Showing an average weekly majority of 211, of which 135 were of yellow fever. On comparing our census population (90,000) with that of your city, (250,000,) it will readily be perceived how very unhealthy the past season has been. The average number of deaths in New York is about 900 per week, while in this city, with a population one-fourth of yours the above figures have succeeded for thirteen weeks in succession.

A New Experiment.

A process for ascertaining the power of building materials to resist the frost, has lately occupied a considerable share of the attention of French philosophers. It consists in causing a fragment of the material, by boiling, to absorb a saturated solution of Glauber's salt, the spontaneous crystallization of which disintegrates the stone, in the same manner as the freezing of water in its pores. If the stone be boiled too long in the solution, or the saturation be effected at too high a temperature, the force of crystallization exceeds the usual effects of frost; therefore, to avoid error in this respect, a series of instructions are given for conducting the process. Water is to be saturated with Glauber's salt at the common temperature; the solution is to be boiled, and while boiling freely, the specimens are to be introduced, and the boiling continued for half an hour and no longer. The specimens are then to be withdrawn, and suspended by threads, with a small vessel, containing some of the solution, under each specimen. In about twenty-four hours, but depending on the state of the atmosphere, the specimens will be found covered with small white crystals; they are then to be plunged, each, into the vessel below it, when the crystals will fall off, and the specimens to be again suspended as before. This process is to be repeated, every time the crystals form on the specimens. The trial should be concluded at the end of the 50th day, after the appearance of the first crystals; and if the stone, the brick, or mortar, under trial be capable of resisting the frost, the salt will remove nothing from it, neither in grains, nor scales, nor fragments; and the solution which was placed beneath it will remain pure. Where two stones are to be subjected to comparative trial, the matter separated from each must be collected, washed, dried, and weighed, that the relative loss of weight may be in proportion which the specimens tried would suffer by exposure to the weather and frost.

Greenough's Statue.

A correspondent of the Columbus (Ohio) Journal, gives the following description of Greenough's Statue. The remarks appear to us to be made in a flippant, unkind tone—however there may be truth in what the writer says. Hear all sides!

"The famous statue of Washington by Greenough, says the correspondent, has been placed in the rotunda of the Capitol. I confess I have been a good deal disappointed in it, and I think that disappointment will be felt by every one. It seems to be a mere copy of the *Jupiter Tonans*, with the head of Washington. He is seated on a bench, *half naked* with some drapery thrown over his legs, and a pair of sandals on his feet—one naked arm is extended in front, holding a sword, which is as ponderous as to require a block of marble to support it. The other is in the attitude of pointing to heaven. The muscles are developed as fully as those of Hercules wrestling his club, or those of Samson pulling down the pillars of the house of the Philistines. The figure is colossal and monstrous, and resembles Mr. Shelley's creation of the monster Frankenstein more than any thing I could imagine. Fancy the noble and honest Washington in a state of nudity, and stripped to the buff like a sailor, or Robert Peel exposed to the gaze of every eye. It is perfectly revolting. The statue weighs 14 tons, and has been placed in the rotunda in safety. The door frame of the main entrance had to be removed to admit the bulk, and the statue is to be elevated on a pedestal some 15 feet in height. There are my first impressions. When it is permanently put up, I will send you a more minute description of this specimen of American arts."

Executors Returned.

Mr. Charles Emerson, who some few months ago was advertised in the papers as having run away from this city to Europe, with the intention of cheating his creditors, has returned in the Britannia, and published a card to the public, with a view of explaining the transactions charged against him, and clearing his character from reproach. He states that he was in the interior of Germany when the news of the failure of his houses in New York and Philadelphia reached him. He immediately left for Paris, where he found a friend, and in a few hours after was on his way to London for the purpose of taking passage in a steamship. He reached Liverpool in time for the Britannia, and arrived in Boston on Sunday last. He says he left America with the honest intention of bettering his affairs, having previously had several offers from London as well as German houses of large advances on his own notes. He had engaged for $45,000, received and paid over part of the money. These facts, and that of his having actually boarded on the 17th of October last a letter of credit for £5000, which arrived too late to do any good, as his house failed on the 24, he hopes will be sufficient to prove that he did not intend to run away. He says—

"I have now come to lay open all my affairs to my creditors, to give up every cent in my possession, and even more, and if the deficiency is not too large, I have courage enough to go to work, and work hard and make up the deficiency, and I believe every body who knows me will testify that there are but few men in this community who have labored harder for the last twenty-two years than myself."

The Western Pork Market.

The St. Louis New Era of the 30th says:

"It is stated in the Springfield Journal that a thousand pork hogs can be purchased in Tazewell county, Ill., in three days at a dollar and a half per hundred. The same prices rules elsewhere, and those who are buying have, do not give more than $1.50. It is hardly probable that much advance will be made upon this price. Cincinnati, the greatest Pork market in the West, in the present condition of affairs in Ohio, in relation to her banks, will hardly be able to engage to any very great extent in the purchase of pork. As the banks most withhold the facilities heretofore extended to the pork buyers, the stock will either not find a market at all, or a very small price must be paid to the drivers. Added to this, there is a very large amount of last year's pork yet on hand; in the city of New York alone, there are 40,000 barrels in the market for sale."

More Trouble in China.

The New York American has a letter from London, which says:

The mail from Bombay left 3d September, and just at the last, another vessel arrived from China with advices of 27th of June. Nothing very particular had occurred in the interval, not had any further light been thrown on the prospects for trade; but it appears a very angry letter had been received from the Emperor, forbidding British trade and ordering the Tartar troops home to Canton. No movement to the northward on our part was expected, until the arrival of the reinforcements from India.

We have Bombay papers of 1st September, (only 10 days old,) which have gone to England and come here. We do not find anything of pressing interest.

Defective Gas.

An able writer at Washington is addressing a series of letters to Mr. Clay, on the subject of southern and western extraction. In one of them, the writer says—In urging the importance of good guns, such as a national foundry would give for our vessels of war, it is only necessary to remind you of the fact that in the last war *we had more men killed on the Lakes by the bursting of our own guns than by the shot of the enemy.* It is a terrible thing in action, and a great damper upon the bravery of the most gallant tar, when he is afraid of his own piece.

Medical Schools.

Notwithstanding the clamor and high pretensions of Medical Schools elsewhere, we are gratified to find these institutions in our city not yet quite annihilated. The Professors in the Medical Schools in this city have made no extraordinary or unusual efforts to obtain students. Yet, notwithstanding the efforts made elsewhere to depreciate Philadelphia institutions, the number at present in our schools is decidedly larger than last year, at the second week of the course. We have ascertained that there were about three hundred and sixty students at the Pennsylvania University, at the Jefferson School, one hundred and sixty, and at the Pennsylvania College, seventy-five. The precise number is not yet ascertained, as students are daily arriving, but they may be put with safety at six hundred, an unusual number so early in the season. One month from the present time, the classes will be fully organized, and then it is expected the grand total will exceed seven hundred!

Taking it Coolly.

The editor of the Union Star, published in Ohio, is about to stop the publication of his paper. Instead of flying into a passion on account of a want of attention on the part of his subscribers, he takes the matter coolly like a philosopher. We commend his example to certain choleric gentlemen hereabouts, who cannot *feel* in their efforts, and keep their temper.

"This is the last No. of the Star that will be issued. Our six months are out—our office sold, and we are about as well off now as we were two years and a half ago when we commenced,—poor and except in this, that we have had a few lessons of dear bought experience; from whose admonitions we shall hereafter profit."

Such good temper, deserved a better fate, and we have no doubt that our late contemporary of the Star, will yet shine brilliantly in his profession. He has our hearty wishes for success.

The United States and England.

A letter in the Richmond Enquirer states that Mr. Stevenson, had a "running fire" with Lord Palmerston, just as the English whig ministry was going out of office, which embraced the case of the Caroline and other things.

The Enquirer adds that a valuable, highly esteemed, and distinguished correspondent, whose information on such subjects is always correct, informs us, "that Lord Palmerston, in the course of the correspondence above alluded to, which will place, when shown to the public in all its points, to be as [illegible] satisfied on the part of England, and in a [illegible] as unequivocal, THE INVASION OF NEW YORK [illegible] UPON THE CAROLINE BY THE BRITISH FORCES, and that his note to Mr. Stevenson was any thing else than satisfactory on other points of difference between the two nations."

Liverpool Mechanics' Institution.

This institution, which was first commenced by Joseph Mangnall, Esq. (its President) is by far the most extensive and splendid institution of the kind in the kingdom. The buildings of the institution cost not less than £15,000. It contains upwards of 2500 members; 600 pupils in these day schools—600 pupils in 15 or 16 evening classes; it has fifty teachers regularly employed, whose salaries amount to £3000 per annum—a library of 7000 volumes, with 1300 readers, and a daily distribution of 500 volumes,—and public lectures twice a week attended by audiences varying from 700 to 1200. There are now in England 216 Mechanic Institutions, all of them established within 18 years.

The Cholera.

The editor of the Cleveland Chronicle has been examining the six returns of the cholera, taking at intervals of ten years each that the adoption of the constitution. The investigation shows some curious facts:—

1. The population of the United States increases exactly thirty-four per cent. each ten years, and doubles every twenty-four years. The law is as uniform and certain, that when applied to the population of 1790, and brought down to the present time, it produces nearly the very result as shown by the census of 1840. And then we may tell with great accuracy what will be the census of 1850. It will be nearly twenty-three millions.

2. But although this is the aggregate result, it is by no means true of each particular part of the country. For New England increases at the rate of 15 per cent. in ten years, while the north-western States inc. [illegible] 100. per cent. in that period.

3. The slave population increased at 30 per cent. but since at less than 25 per cent. The free population have however, increased at the rate of 36 per cent. At this rate, therefore, the difference between the free and slave population is constantly increasing.

4. Another fact is that the colored population increase just in proportion to the distance south; and that slavery is certainly and rapidly decreasing in the States bordering on the free States.

This state of things continued, would, in half a century, extinguish slavery in these States, and emancipate the whole black population of the United States on the Gulf of Mexico, and the adjacent States on the southern Atlantic.

Rhode Island Convention.

The Convention legalized by the assembly of Rhode Island to form a constitution for that commonwealth, met on Monday week; but the result of their labors has not yet come to hand. We alluded to this Convention in one of our leading articles last week. We repeat now what we then said—that should this Convention form a Constitution which should afterward be adopted by the freeholders of Rhode Island, and should the Constitution projected by the suffrage Convention be adopted by the free white male citizens of legal age, there will occur a spectacle which this country has not witnessed since the revolution—viz. a commonwealth having two executive officers, two sets of judges, and, worse than all, two Constitutions. Opposition, especially in commotions, is said to be for the public good; but whether this running of two Constitutions will be beneficial is not so clear. Little Rhode Island has been so long without a Constitution that she is now above having only one. She reminds us of the boy of whom Franklin speaks—the little fellow grouped after his many apples and lost all. Fine times the Rhode Islanders will have when they get two sets of "men in authority"—rogues can then strut through her cities and snap their fingers at the *opposition* officers.

Britain and the U. States.

The London Times contains some savage articles in relation to this country. Among them a plan of the war, and a sketch of the manner by which the Union might be broken up. The following is one of its most fiery paragraphs:

"But, whatever the fate of McLeod, the day of reckoning with Great Britain remains. If the Americans imagine that the equitable settlement of this question depended solely upon the elaborate farce which they have played off at Utica, they are wofully mistaken. This country cares not a fig for the timid trimming of their timid brimmed jury. Of what is due to British subjects and British interests, our own Government shall alone be permitted to judge. Her Majesty's Crown and dignity have sustained an aggravated insult in the person of McLeod. Reparation, in some shape or another, cannot be dispensed with. The liberation of the injured prisoner offers no indemnity for the past, and no security for the future. We do not desire war. Nay, rather than a sacrifice of national honor, we would adopt almost any alternative to avoid it. But Lord Aberdeen does not stand in need of our humble counsels to direct him in the path of duty."

The La Belle Poule.

The Prince de Joinville's frigate "La Belle Poule," lies off the Battery at New York.—She is now enough to the North Carolina, 74 gun ship, to enable a contrast to be drawn. Her model appears to be the more trig, symmetrical and neat of the two. The North Carolina is high out of the water, is huge in her proportions, has bright painted ports, and an almost perpendicular stern. The "Belle Poule" sits light upon the water, and her spars appear unusually long and graceful. Every thing about her is black, and yet the eye is not pained by it, because there is such exquisite finish, such perfect symmetry where. It will be remembered, this ship under command of the Prince, conveyed the remains of Napoleon from St. Helena to France. The apartment in the ship is held sacred. It is almost worshipped by the deceased Emperor's contemporaries. It is kept in precisely the same manner state it was when the "remains" were deposited in it, and never used, except for some solemn rites, such as are occasionally held on ship-board.

Jared Sparks.

The New York Historical Society has engaged Mr Sparks, the distinguished biographer of Washington, Franklin and Morris, to deliver a course of lectures before that body. The introductory one was spoken Friday evening week, to a cultivated and delighted audience of six hundred. The lecturer touched upon the leading events which preceded the war of the Revolution, and handled the character engaged and the incidents which led to it, with consummate ease and skill. The New York American says that the next lecture, which was delivered last evening, would sketch the proceedings of the *first Continental Congress*. This assemblage, of course, was held in Philadelphia. Would not this finished and gifted lecturer find a welcome on such a topic in this city? Will not the "Historical Society" here avail itself of the services of this accomplished gentleman of literary fame, and thus by the effort of his eloquent, and that Sir Frederick Pollock will be his successor. In connexion with this arrangement, it is also said that Lord Abinger will, at the same time succeed the chancellorship of the Exchequer, and that Sir Frederick Pollock will be his successor therein.

The Great Western arrived at Bristol on Friday morning, Oct. 9th, having made the passage in 14 days and 12 hours. From our private letters we learn that there was a most extraordinary interest manifested among all the leading merchants of London and Liverpool at the non-arrival of the Columbia at the usual period. She encountered very severe weather, and did not reach Liverpool till the evening of the 19th ult.

The Britannia was detained by order of the Post master General, at London, 48 hours, and left Liverpool October 21st.

On the 16th and 17th ult. Her Majesty was so ill that Dr. Locock and Sir James Clark were immediately summoned to Windsor Castle—it being an indisposition accidental to her present condition, and not affecting her general health, the doctors pronounced the Queen in good health on the following day.

The Queen and Court left Windsor Castle for London on the 19th ult., where the Queen intended to remain till after the accouchement.

There have been three heavy failures in Glasgow—one was a commission house connected with America, and the cause is assigned to the want of remittances by the Halifax steamer. Several failures in London, also, to a large extent.

There was a great rise of the Thames on the 19th ult., which destroyed an immense amount of

SATURDAY POST.

Terms of Subscription, &c.

$3 per annum—$2 if paid in advance; $1.25 in advance for six months.

Postmasters are requested to forward their letters addressed to us. The word "free" of itself is not a frank.

Agents will please endorse their letters with their names or initials.

Other letters will not be taken from the Post office unless the postage is paid.

Papers discontinued only at the end of the current half year's subscription, and then only at the option of the Publisher if arrearages are due.

Small Bank Notes of solvent Banks received in payment for our bills.

Agents are earnestly solicited to make quick remittances, without which it is difficult to keep accounts correct. They should always give names and time paid for.

Any person forwarding Ten Dollars current, free of postage, in advance, will be entitled to six copies.

Removals must always state the Post-office removed from, as well as to which the paper is to be addressed.

New Counterfeits.

Northern Bank of Kentucky.—100's letter B. payable to B. Moore, dated July 17, 1836. M. T. Scott, Cashier, Jas. W. Tibbed, President. Vignette dark and imperfect.

Tradesmen's Bank, New York.—5's letter D. pay Le. Seymour, dated June 2nd 1835. M. H. Falls, Cashier, Preserved Fish, President. Signatures and filling up in same hand.

Mechanics' Bank, Hartford, Connecticut.—20's altered from 5's. The 5's have the portrait of Lafayette on the left, and on the right is a figure of Justice, with the words "For Justice—underneath, and the middle vignette is a female figure sitting in a car, enveloped in clouds, drawn by cupids, by which the altered notes may be detected.

THE SCHUYLKILL BANK.—A meeting of the stockholders of this Institution was held at the Banking house a few days since, at which Dr. J. R. Cope presided, and Mr. Allen acted as Secretary. The Directors submitted a statement of the affairs of the Bank, showing that the assets amount to about $360,000 over their liabilities. A lengthy correspondence between the Directors of the Bank and the Bank of Kentucky was read, which, with several resolutions, were ordered to be laid on the table. A committee was appointed for the purpose of forming a ticket to be supported for Directors, after which the meeting adjourned.

SCHOOLS IN MASSACHUSETTS.—The Boston Daily Express says that the amount raised by town taxes the last year, throughout the State, for school purposes, was $491,015 23, which added to the amount of income of the surplus revenue appropriated to the same object, of $9,523 66, makes an annual appropriation of HALF A MILLION OF DOLLARS. The number of children enumerated, between the ages of four and sixteen, is 183,492. The average sum appropriated to the instruction of each child, is $270.

CINCINNATI.—Five hundred and fifty market wagons, filled with all the substantials which the vicinity of Cincinnati is capable of producing, were counted in range of each other along the market place on Saturday last. In addition to the profusion of bacon, beef, wild fowl, &c., then offered, the stalls in the market presented an abundance of choice roasting pieces ready to grate a pound and ducks at 48 cents a pair. So says the last Republican.

ROBBERY.—The steamboat Illinois, was robbed of $2500 worth of dry goods on the 23d. The next day the goods were found concealed in the barn of two brothers named Kellam, Englishmen, on their farm three miles distant. They are worth some $6,000, but precious. On examination, one of them was released, and the other, with a man named Allen, fully committed for trial.

CURRENCY IN GEORGIA.—Governor McDonald recommends the support of the Central Bank, and the establishment of a single Bank at the principal seaport of Georgia, with branches, and that the present Bank charters should not be renewed or extended.

LEVIS.—A letter from Galveston says—"Levis, the great Philadelphia financier, is still here; he resides at the country residence of Mr. Moore Phillips, Esq. about five miles from the city, which is now known by the appellation of 'Levis' Retreat.'"

DIVIDENDS.—The Directors of the Farmers Bank of Lancaster have declared a dividend of $1.25 per share.

The Columbia Bank and Bridge Company has declared a dividend of 2 per cent. per share.

LETTERS.—The Britannia brought 15,000 letters, nearly 9000 of which were for New York, and the postage on these for that city alone amounted to about $15,000.

SCHOOL FUND.—The sum of $31,087 is distributed annually, in Georgia, among the several counties as a poor school fund.

Political Intelligence.

NEW YORK ELECTION.—The election throughout the State of New York, for members of the State Legislature, took place on Monday, Tuesday and Wednesday of last week. A member of Congress was also elected in the district lately represented by Mr. Greig, commonly called Granger's district. The Democratic party has elected a majority of the Senate, and so many members of the House as hardly to leave the Whigs a minority. In the city of New York, the vote was close. Varian and Purdy (Dem.) had, respectively, for Senators, 16,456, 16,314; Franklin and Lord (Whigs) 16,316, 16,131. The Catholic ticket polled about 2300 votes. Varian and Franklin, it is said, are elected in the Senatorial district, comprising the city and county of New York, and the counties of Richmond and Kings—the former by 177 majority, and the latter by 52. Of the 13 members of Assembly chosen by the City, 10 are Democrats and 3 Whigs. As far as heard from, the Democrats have elected 6 out of the 10 Senators chosen, which will make the next Senate stand 17 Democrats to 15 Whigs; and 89 Assemblymen to 19 Whigs. The House consists of 128 members—consequently the Democrats will have a large majority. The last House stood 66 Whigs, 62 Van Buren.

Frank Granger is elected to Congress from his old district, by a majority of 417.—There appears to have been a great falling off in the vote polled—some 9000 or 10,000 in the City of New York alone.

The Legislature opposite nearly all the high offices of State—such as Secretary, Comptroller, Treasurer, &c. &c.

MASSACHUSETTS ELECTION.—The election in Massachusetts has resulted in the success of the Whig candidate for Governor, (Davis,) by about five or six thousand majority over Morton, the Democratic candidate. Returns from 366 towns give Davis 49,482—Morton 44,852—scattering 1,004. Forty-two towns remain to be heard from, which will increase Davis' majority. The Whigs have elected twenty-three Senators to the Legislature, giving them a majority of six, and sixty-two Representatives. The Democrats have elected thirty-six Representatives to the House. The Whigs will have a large majority in the latter.

MICHIGAN ELECTION.—The Michigan State election for Governor and Legislature occurred on the 2d instant. We have received the Detroit Free Press, extra, giving the returns so far as heard from. These indicate that Michigan has followed the other states, and gone for the Democrats. Detroit has given Barry, the Democratic candidate for Governor, 281 majority. Last year Harrison had 98 in the same place. A letter says the county will give some 300 or 400 majority, and that the Democrats will elect both Governor and House. There is a bare possibility of the Whigs having the Senate.

MISSISSIPPI ELECTION.—The election in Mississippi for Governor, Legislature, two members of Congress, and State officers, took place on the 1st inst. to continue three days. The Whig candidate for Governor is D. O. Shattuck, the Democratic F. A. Tucker, the Whig candidate for Congress are A. L. Bingaman, and W. R. Harley. The Democratic, W. M. Gwin and Jacob Thompson. The Democratic members are opposed to paying the State bonds, and on this question the election principally turns. The result will be known in a few days.

OHIO ELECTION.—The election took place on the same day as our own—consequently but few returns have yet come to hand of a correct nature. So far as received, they show a general falling off of the Whig vote, while the Democratic vote, if not fully maintained, yet sufficiently so, as to succeed in carrying many counties where the Whig majority last fall was not very large. Members of the Legislature, only, were chosen; but the information received is not comprehensive enough to judge of the general result.

GEORGIA LEGISLATURE.—The Georgia Legislature organized on the 2d inst. In the Senate, R. M. Echols, (Dem.) was elected President without opposition. In the House there were several ballotings for Speaker, the Democrats being divided. They finally united on Mr. Wofford, of Habersham, who had a majority of 24 over the highest Whig vote. Gov. McDonald sent in his message.

MICHIGAN ELECTION.—The Democratic party in Michigan have carried their Governor and Lt. Governor by from 4 to 6000 majority. It is probable that they have carried every Senator, 11 in all, which will give them a majority, and it is said they will elect every representative in every county and district in the State, making an entire Democratic House of Representatives.

ELECTION PROTEGIES.—The Senate of Tennessee has decided for the present against going into an election for U. S. Senators.

POLITICAL ON DITS.—There is a rumor at Washington, of a misunderstanding between Messrs. Wise, Ohio, and Mallory, of Va. the gentleman who succeeded Mr. Tyler in the last Congress, and it is also rumored that Mr. W. C. Rives has declared himself for Mr. Clay, for the next Presidency. It is said that he made such a declaration to several gentlemen at Charlottesville, Va. Rumor does stranger things for born mountebanks.

VICTOR E. PIERRET has been appointed by the Governor appraiser of damages on the Pennsylvania State Works, in place of William McCreedy, deceased.

General News.

A MERITED TRIBUTE.—The New Orleans Crescent City stands high praise to Mrs. Shall, the proprietress of the City Hotel, for the attention and kindness to the sick of that city, during the prevalence of the epidemic not only this but past season. It is stated that in 1830, Mad. Shall had in her house upwards of 60 yellow fever cases, only one of which proved fatal. This year she had 18 cases, with only one death. And all this principally attributable, under Providence, to her skillful and kind nursing. Besides this, she has visited neighborhoods and sufferers for distant, carrying the balm of health in her hands. This is, indeed, the reality of the poet's vision, who wrote of woman

"When pain and anguish wring the brow,
A ministering angel thou."

EXPENSIVE FLOGGING.—It was announced some time ago that a student of the Oberlin Institute, named Newton, was decoyed into the woods, and there severely flogged, for writing letters to some of the young ladies belonging to the Institute. The high-handed proceeding was performed by some of the persons in authority in the Institute, who previously prefaced the ceremony with a prayer. Newton, very properly, has since brought a suit against them for the outrage, and obtained a verdict of $1500 damages. He no doubt richly deserved as severe a flagellation as he received, but it should have been legally bestowed; and the Court has very properly vindicated the majesty of the law, by making those who usurped its privileges pay the penalty of their audacity.

HALLOW E'EN PRANKS.—On Saturday night, the 30th ult. it being hallow e'en, a party of individuals in Washington city determined to amuse themselves by taking a frolic at a distance from home, and "stealing cabbages." Accordingly, they proceeded to a point rather sparsely settled, and entered a lot where it seems the owner was lying in wait for intruders with a loaded gun. Perceiving his premises to be thus invaded, he took aim, drew the trigger, and a whole load of shot entered the lower extremities of one of the aggressors. Finding the individual severely wounded, the party repaired to a dwelling adjacent, where an examination disclosed the fact that the sufferer was a young *girl, dressed in men's clothes!*

FROM CENTRAL AMERICA.—Honduras papers to the 3d ult. have been received by an arrival at New York. Nothing of importance is to be found in them except an account of an attempt to assassinate General Carrera, the virtual head of affairs in Central America. The author of the attempt was a mercurial player named Chepito Andrade. Carrera was slightly wounded, but aided the assassin on the spot. The Presidential chair, after being refused by Carrera, was accepted by Venancio Lopez, a learned pillar of the law. The Vice President is also a member of the same fraternity.

REWARD OF CURIOSITY.—At Palermo, in Sicily, is an elegant private garden, in which are a number of ornamental buildings. On the door of one is written: "Non aprite," that is "Don't open." This probably not only serves to excite the curiosity of the visitor, who immediately proceeds to disobey the hospitable owner's injunction. On opening the door, a forcible jet of water is squirted full in his face, and, though not very severe retribution for a prying curiosity.

A WIFE WORTH HAVING.—We notice with peculiar pleasure, the recent marriage of Miss Charlotte Mitchell, of Georgia, to William Wattington, Esq. The lady appeared on her wedding day, dressed entirely in silk of her own manufacture—*cap, gloves, stockings* and *shoes*—equal to the best pongee. *Girls, do you hear that?* Such a girl would be worth more to a young man just starting in the world, than a thousand dollar farm, and a half dozen pianos to boot.

A TEMPERANCE MOVEMENT IN THE WEST.—We learn from a Pittsburg Intelligencer, that a great Temperance Convention was lately held at that place, consisting of members from Western Pennsylvania, and the adjacent portions of Ohio and Virginia, at which delegates appeared from forty-five Societies, representing, directly and indirectly, at least twenty-five thousand people who have joined the Temperance Total Abstinence Societies within the past year.

A MARRIED MAN.—An unmitigated scoundrel named Wellington, has been arrested in Richmond, charged with the seduction and marriage of several women, whom he afterwards basely treated and abused. He had assumed various cognomens in carrying on his amours, and forged letters in the names of many respectable individuals, to more fully deceive the unsuspecting and confiding victims of his diabolical passion.

AN ANCIENT PRINTING PRESS.—The Newport (R. I.) Mercury, in noticing the advertisement of Franklin's press, says that office has an old printing press of even greater antiquity. It formerly belonged to James Franklin, with whom Dr. Benjamin Franklin served his apprenticeship, and was probably brought by the former to Newport on his removal from Boston, about the year 1720.

TO BE HUNG.—Zachariah Monk has been condemned to be hung at Mobile, on the first Friday of February next, for the murder of John Hughes. His accomplice, Edwards, was tried and condemned, and has been respited several times until the trial of Monk should be concluded. Much commiseration was felt for the prisoner on account of his extreme youth, being only seventeen years old.

MILLIONAIRES.—According to the N. Orleans Crescent City, the number of beautiful women in mourning in that city is immense. Some are widows, bereft of a husband's tenderness; some mothers, deprived of a son's or daughter's companionship; others are sisters and maidens, desolate in the world, seeking in vain a brother's kiss or a lover's passion.

OHIO.—The Toledo Blade gives a rumor that Mr. Sheedman, a representative elect from the Lucas district, is ineligible to a seat in the House, from the fact that he is under twenty-five years of age. If this be the fact, Mr. Pomeroy, a Whig, having next highest vote, would be entitled to the office, and thus place parties in a tie.

THE OLD OAK.—Near Natchitoches, there stands an old oak tree, the largest in America. It is of the red species. Two feet from the ground it measures *forty-four* feet in circumference, and at six feet *thirty-three* feet. The trunk appears sound and healthy, and its height to the branches is from fifty to sixty feet.

NEWSPAPER CHANGE.—Mr. Allen, of the Madisonian, has disposed a part of that paper to John B. Jones, Esq. by whom it will be principally conducted hereafter. He will be assisted by editorial labor of a high order, and the paper will render a vastly intelligent, and efficient support to President Tyler's administration.

THE CHINESE MUSEUM.—The New York Express says: "The packet ship Hendrick Hudson, which leaves this port on the 20th inst., will take out to London the celebrated Chinese Museum, which has been for some time past on exhibition at Philadelphia. The whole collection weighs about 400 tons.

THE HEIGHT OF POLITENESS.—A gentleman in New York who had his pocket book cut from his coat while reading a bulletin in front of one of the newspaper offices, returns his thanks to the thief for commencing the job on the inside, and it was much less injurious to the coat then if done on the outside.

INSPECTIONS.—The Baltimore Sun says that the inspections of flour in that city, during the last week, amounted to 12,054 barrels and 826 half barrels wheat flour, 185 barrels of rye flour, and 200 barrels kiln dried corn meal. Of tobacco 494 hogsheads of Maryland, and 14 of Ohio were inspected.

A STEAMER BURNED.—The St. Louis Bulletin says—"The Mary Tompkins, from the Missouri river, reports having left the steamboat Orange two miles below Weston, repairing damages—having struck a snag and sunk on the 23d ult. She was expected to be able to leave the next day.

THE COLLIERIES.—The Miners' Journal says that a large number of men have been discharged, both in the mines and on the landings, in consequence of the operators being unable to forward as much coal as formerly, owing to the partial obstruction in the Canal.

A MURDER.—We learn from the Natchez Courier that a man named Jacob Kimberlin, of Lejanor, Germany, was shot dead in Adams county, Miss., by Samuel H. Sall. The murderer had fled at the last dates and was not yet arrested.

A GROWING TOWN.—The St. Louis Commercial Bulletin says, that not less than one thousand substantial buildings of the largest class were erected in that city within the past year, some coming from $3,000 to $40,000 each!

SPORT.—Three gentlemen, residents of Burlington, N. J. went on a gunning excursion on Wednesday and Thursday week to Long Beach, and killed one hundred and sixty-six wild ducks.

TEMPERANCE.—Two hundred and twenty-two persons have recently signed the Temperance pledge at Hollidaysburg.

THE YELLOW FEVER is abating rapidly in New Orleans, a check having been put to it by the frost.

AN ARREST.—A young Englishman, named John M. James, was on Saturday brought before Judge Tallmadge of New York, to try the legality of certain proceedings against him. He had been arrested on a warrant issued at the instance of a Mr. Marshall, an agent of one of the packet lines, who had received information, accompanied by illegal vouchers, that the said John M. James had shipped a large quantity of leather, &c. being his stock in trade, at Liverpool, and had embarked himself for New York, taking money and every thing he could cleverly lay his hands on, and that it was his intention to defraud his creditors out of the same which were justly due to them. A letter from the son to the father, which had been intercepted, fully exposes the scheme. Mr. James is rather a gay-looking young Englishman, sporting a neat pair of moustaches. The Court took time to consider the question, and James was most reluctantly remanded. There are about forty packages of goods belonging to him on board the ship.

DISTRESS IN ENGLAND.—The high price of bread in England has led to the most extraordinary expedients on the part of the dishonest, to deceive the public by adulterations composed of flour, gypsum, alum, and potato starch. At Newcastle-upon-Tyne, a short time back, a man named Copeland was convicted before the magistrates for selling adulterated flour, which proved to be sulphate of lime, or gypsum, and the ingredients mentioned above. This deception is practised, it would seem, to a great extent in the manufacturing districts, where the poverty of the people leads them to catch at any thing which offers a relief to the misery they suffer.

A DESTRUCTIVE FIRE IN PETERSBURG, VA.—On Monday morning last, a fire broke out in the stables of Powell's Hotel, which were destroyed, with the hotel, the Presbyterian church, and the kitchen and stable of Dr. Jones. In the stables were burnt *thirty-four horses*, the property of Dr. Jones and guests at the hotel. Among other buildings on fire, were the Masonic Hall and the Mechanics Hall. The hotel cost upwards of $30,000 to construct—there was an insurance for $12,000 upon it. The church, of which the Rev. John Leyburn was pastor, cost about $20,000—insurance about $15,000.

SUGAR CROP.—The New Orleans Courier says—Albeit our information is from several respectable persons, we state with regret, that considerable rust has been done to the sugar cane in Louisiana by the late frosts. We had indulged hopes of quite a different result, under the permission that a slight frost was needed to hasten the ripening of the cane. If our informants are to be credited, there was a degree of vigor in the late frosts, that made them more injurious than beneficial."

MARRIAGE ABROAD.—The London Herald of the 23d ult. announces the following:

Captain Canfield, of the United States Army, was married yesterday, at Trinity Church, Portland Place, to Miss Mary Cass, daughter of his Excellency General Cass, Minister of the United States at Paris. Among the company present were his Excellency Mr. Stevenson, Mrs. Stevenson, Col. Todd, United States Minister to St. Petersburg, &c.

WRIT SUSPENDED.—Benjamin F. White, convicted in Boston of killing Thomas Wade, the mate of the ship Constantine, on the 13th of May last, was on Saturday sentenced by Judge Story to three years confinement in the Boston jail, and also to pay a fine of $300. The statute of the U. States, under which the sentence was passed, enjoins for this offence the mild punishment of an imprisonment for three years and a fine of not over $1000.

IT IS AN ILL WIND THAT BLOWS NOBODY GOOD.—An incident of peculiar interest occurred during the burning of the Presbyterian Church in Georgetown. The schooner Essex was out swing to the darkness and stress of the night, was unable to discover the light house, and must in all probability have been lost but for the light of the fire, which pointed her to the harbor, and lighted her safely into port.

CAPT. CLELAND having resigned the command of the Britannia, his place has been filled by Capt. Hewitt, who was previously the first officer of the ship. Capt. H. has many years been in the American service. He was with Com. Jones in the Mediterranean, when the coast of Sumatra, a few years ago, and was for a considerable time attached to the Philadelphia packet ship Rebecca Sims.

ESCAPE FROM PRISON.—Charles Moor and Tom Smith, two finished villains, effected their escape from the Buffalo jail on the night of the 2d inst., by striking down the keeper just as he opened the door for the purpose of letting in some warm water which they had solicited. They also robbed the jailer of what money he had about him.

MORE INDIAN MURDERS.—On the 24th ult. a party of Indians attacked a party of seven gentlemen on their way to St. Marks and Port Leon, and killed three of them, Messrs. Wright, Wade, and Schoolcraft and Henry Horn. The Indians rifled the pockets of the dead, and it is supposed that they got a booty of 6 or $700.

RARE FOR "DOWN EAST."—According to the last Kennebec (Maine) Journal, the weather has been so mild there for a week past that many of the trees in our summer have made their appearance, such as dandelions and others. Some appletrees have opened their blossom buds, and are now in partial bloom.

A BURGLAR CONVICTED.—John Carson was tried, at West Chester, last week for burglariously entering the store of Jacob Taylor, in September last by night, and sentenced to five years in the Eastern Penitentiary. He had served three years in the same establishment for a similar offence.

THE CONSTITUTION.—The Norfolk Beacon says:—"The U. S. ship Constitution, Capt. Farrow, which has been lying at anchorage off the Naval Hospital, got under way on Saturday evening, and proceeded up to the Navy Yard, preparatory to discharging her crew and being dismantled.

INDIANS SENT TO COLLEGE.—Six half breed Indians, four males and two females, of the N. W. Tribes of Indians, from 500 miles above Sault Ste. Maine, have arrived at Dunkirk, New York, on their way to Fredonia, to receive an English education at the College in that village.

SMOKING ACCIDENT.—On Tuesday afternoon, while a young man named William Davis, was engaged in cleaning a machine called "dough break," at Watson's Bakery, both of his arms were drawn into the machinery, and shockingly mangled thereby.

MORE SOLDIERS.—A new infantry corps has been formed at Hohenheim. The first parade was made on Monday at that place, under the command of Thomas D. Dougherty. The uniform is that of the Philadelphia Greys, of this city.

THE PATRONS OF EDITORS.—Baron Cotta, of Austria, Mr. Reimer of Berlin, and Mr. Brockhaus, of Leipzic, are the most extensive publishers in the world. The first employs four hundred editors, and the two last, one hundred each.

DEATH OF THE GIRAFFE.—The beautiful Giraffe, belonging to the menagerie of Messrs. Lake, Titus, Lewis & Co. at Centreville, Indiana, recently died, by which the proprietors are the losers to the amount of $20,000.

THE MENDI AFRICAN.—Cinque, and his company, are at Boston. They are getting up a Concert in that city, the receipts of which will be appropriated towards defraying their passage home to their native country.

ASSASSINATED.—Capt. T. W. Thompson, the well known master spirit of the Mexican Navy, has been stabbed at Tobasco, and his murderer an officer who was with Thompson at the time, killed the assassin.

NAVAL INTELLIGENCE.—The U. S. ship Ontario, at the Brooklyn Navy Yard, has been ordered to be repaired immediately, and will sail shortly for New Orleans. She is intended for a guard ship off that port.

CONVEYANCE BY STEAM.—An extensive Company has been formed by the conveyance of goods and passengers on the road south coasts of Ireland, by means of steam carriages.

SEWED BY STEAM.—The South America, a North river steamer, lately went one hundred and twenty-six miles in six hours and nineteen minutes, including stoppages.

A VILLAGE NEARLY DESTROYED.—A few days since, a great portion of the village of Chittenshange, Madison County, N. Y., was destroyed by fire.

CRIME AND MISDEMEANORS.—During the last week one hundred and eighty-seven persons were committed to the Tombs in New York.

LORD MAYOR.—Daniel O'Connell has announced himself as a candidate for Lord Mayor of Dublin.

City News.

A SINGULAR CASE.—Some weeks ago, an Irish woman presented herself in the house of a lady at the southwest corner of Fifth and Walnut streets, the Sunight with her a fine child, a boy about six months old. The object of her visit was to ask alms, covering her request with a statement that her husband had shortly previously been killed in the State of New York, in consequence of the falling in upon him of a bank of gravel. The child was in a most miserable condition, and was sent from head to foot, the lady of the house naked the woman if she had no other clothes for the poor infant; she said yes, and expressed a willingness to procure them, and accordingly started off, hour upon hour passed away, and yet the woman did not return. The child was therefore adopted to the lady, clothed decently and harbored comfortably; matters remained *in status quo* for about three weeks, when one day the mother of the child suddenly rushed into the cellar kitchen, seized it and carried it off, without leaving her name or place of residence.

CAUTION TO WATER DRINKERS.—A woman residing in the lower section of the country, a few days ago, placed her mouth over the spout or nozzle of a small hydrant for the purpose of slaking her thirst; but little time elapsed before she was taking with excess and cast forth a live eel about four inches long. Applicants at hydrants should supply themselves with a tumbler or some other convenient vessel, and before they commence the agreeable exercise of swallowing other things, that might slip down, as "*slick as an eel.*"

ACCIDENT AND WONDERFUL ESCAPE.—On Monday morning, Mr. William Sanders, a young man, just out of his apprenticeship, while at work upon a new building, a three story brick, situated back from Ulrichst street, between Ninth and Tenth, fell from the third story through the joists to the cellar, without sustaining any serious injury, not a single bone being fractured. The accident was occasioned by the round of a ladder on which he was standing, breaking.

THE SCHUYLKILL COAL TRADE.—"The Miners' Journal of Saturday says—"The shipments this week are unusually light, owing to the continued low stage of water in the Canal. The whole amount shipped, including the Little Schuylkill, is only 15,751 tons—twice this season, 339,217 tons—to the same period last year, 382,171 tons.

AN ESCAPE FROM PRISON.—One night last week a man confined in the debtors' apartment at Moyamensing succeeded in sustaining his escape. He gained the yard, climbed on the top of a woodpile, and with a rope which he had previously constructed by cutting his handkerchief and other bed covering into shreds, lowered himself over the wall.

A PARDON.—We have been informed that Governor Porter has pardoned Dr. Chauncey, who was convicted in the Elias Bowers case. Dr. Chauncey was sentenced to undergo an imprisonment of three years, and has now been in the penitentiary for nearly two years.

THE CASE OF HASSLINER AND WRIGHT.—In this case we understand Mr. Wright has withdrawn his application for a new trial. Mr. Hassiner will probably do the same. An agreement will very likely be made between the defendants and their creditors.

A FREAK OF NATURE.—A gentleman who resides in Christian street, near Front, and who has a number of plumb trees in his garden, has been this year favored with a second crop of fine plumbs.

From Florida.

Another young officer of our gallant army, says the Savannah Georgian, of November 3, has fallen a victim to the fever which has this year rendered desolate many a home in Florida. We allude to Lieutenant Gassner, who died at Pilatka on the 30th ult.

The deaths of Major Brown and Captain Gonzaw have heretofore been announced. Captain G. was a nephew of General Armistead.

Correspondence of the Savannah Georgian.

EAST FLORIDA, Oct. 30, 1841.

Alligator and Tigertail are to be at Fort King this day. Lieutenant Sprague, A. D. C. has arrived at that post, accompanied by a number of Indians, part of whom belong to the Arkansas delegation. His object is to open a communication with Alleck Tustenuggee, by means of his brother, who recently delivered himself up.

In about ten days the expedition intended to operate against Sam Jones' camp in the Everglades will commence its march from Fort Lauderdale, and in greater variety than any other expedition that has yet set out from the fort. The General Council have also received the 38 Augustine News of Friday last. Extracts on the subject.

The body of the late Captain H. Garner, 3d U. S. Artillery, was brought from Picolata on Sunday last, and interred near St. Francis Barracks, in this city. His remains were escorted to the grave by Company E, 3d Artillery, under the command of Lieutenant H. Bragg, followed by Major Andrews, Captain Waite, Lieutenants Brown, Taylor, Boyd, and Dorton Martin Porter, and Simons, of the army, Lieutenant Benham, of the Engineer Corps, the Masonic Fraternity, and the citizens generally.

The funeral of the late Major Jacob Brown, acting paymaster U. S. A. took place in this city on Monday week. The body was escorted to the St. Augustine City Guards, followed by Major Andrews, Captain Waite, Lieutenants Brown, Boyd, and Dr. Porter, of the Army; Lieutenant Benham, Engineer Corps, and numerous citizens.

Company G. 3d Artillery, arrived in town on Tuesday week, and have taken post at St. Francis's Barracks.

Company E. 3d Artillery, under the command of Lieutenant B. Bragg, accompanied by Lieutenant Taylor and Drs. J. Martin and Porter, arrived here on Monday week, in the steamer Wm. Gaston, for Fort Pierce.

The schooner Walter M. Captain Hitchcock, arrived at Augustine from Pensacola, on Friday last. By her we learn that a scout had been out from that post, and returned on the 20th, without finding any Indians.

Box in America.

The New York Courier says:—In speaking of the *Knickerbocker* we intended to have added that we were indebted to our friend Mr. Wright for the number of plumb trees in his garden, has been this year favored with a second crop of fine plumbs.

From Florida.

Another young officer of our gallant army, says the Savannah Georgian, of November 3, has fallen a victim to the fever which has this year rendered desolate many a home in Florida. We allude to Lieutenant Gassner, who died at Pilatka on the 30th ult.

Mexico.

Commenting upon the present aspect of affairs in this unnamed republic—an account of which will be found in another column—the Mexican Mirror observes:

"It may be supposed then that the standard of revolt will gather around it not only the Federalists, but all the malcontents in the country, and that the struggle will be one of the most bloody and desperate character, and that it will be a contest in which the interests of a new order of things affords the hope of profit and advancement. Among the adventurers who have embarked in the enterprise for the purpose of bettering their fortunes, all broken down politicians are of course included. In the ranks of others of less note, Santa Anna appears conspicuous. He has, it seems, dismissed the entry to Federalism which once instigated him to the murder of one of its most heroic champions, Gen. Mexia, and he now appears for the cause on the Centralist side, equalled by the bitterness of his previous enmity. What the designs of the arch hypocrite are, can be readily conjectured. Perhaps it would be for the good of Mexico if these designs succeeded. He is ignorant, degraded and enslaved population are unfit for freedom, and despotism in its most abominable forms is to be preferred to anarchy. Whatever triumphs in the pending controversy, whether Santa Anna or Bustamante, it is to be expected that the successful military chieftain will rivet faster the chains that bind his country to degradation and slavery."

The Movements of Santa Anna.

Santa Anna, it is said, has declared himself Dictator of Mexico, and has promised to restore the Constitution of 1824. Other accounts say that he was in treaty with Bustamante, but that his real object was to secure all power. "He arrived at the capital with his troops, on the night of the 3d September, about three o'clock, captured by assault the fort of San Francisco, one of the strongest holds of Bustamante, and also the fort of St. Geronima.—Most of the officers and men captured, immediately enrolled themselves among St. Anna's party. On the 3d, President Bustamante, with 1500 infantry, and 500 cavalry, attacked one of the posts of Santa Anna, but being resisted by 500 men of the corps of Peubla and Largan, was repulsed with great loss, and retired, leaving on the ground his killed and wounded.—Gen. Galindo, on the same day, with 700 men, shot down the cause of Bustamente and joined Santa Anna. The Courier says, that at the last accounts General Santa Anna had completed the besieging line around the capital, with the prospect of its early surrender.

Letters from Vera Cruz state that all was confusion, and that it was impossible to predict the result, although it was hoped that a compromise would be effected between the parties. General Victoria had been called in as a mediator.

Washing on the Water.

Under this head the Cincinnati Gazette of the 3d inst. notices an invention of a gentleman named Evens, of that city, which is called a "Life Preserver," by means of which the power of locomotion is retained in the water, in an upright position, giving the wearer the power of keeping on the surface, with the ability of observing whatever is going on. It consists of a generous, water tight, to encase the feet, legs and the body to near the arms, and near the latter is fitted a large life preserver. To the hands are fitted paddles. The buoyant power of this garment is so great, as to float any one for hours, without getting wet. We saw (says the editor of the Gazette) a trial made on the 3d instant, in front of our city, where the wearer entered the water and passed into the channel opposite Broadway, and walked down to opposite Walnut street, a distance of 1400 feet.

THE OLIO.

Variety is the spice of life.
That gives it all its flavor.

Written for the Saturday Evening Post.

My Coat.

Remain with me, oh my lov'd old coat,
In peace together let us both grow old,
For ten long years, my comfort to promote,
My care has been thy beauty to uphold.
Though fate attack thee with unsparing hand,
Fearless, like me, be firm, resent with art,
He is the caster who can fate withstand.
My lov'd old friend, oh do not let us part.
Through long the time, yet I remember well,
When on my birth-day I first put thee on,
Of thee my friends rang with a merry swell,
And praise of thy beauty 'mid the rising sun.
Thy indigence, just object of my pride,
Binds them in love to me, and none depart,
They'll feast so yet, for so they'll still provide.
My lov'd old friend, oh do not let us part.
Ever did I, ambition by my side,
Disdain the offered hand, or bend prostrate fall?
Or, with fawning, to gratify my pride,
E'er on the great or mighty did I call?
The fool will for ribaud lose his coat,
Th' ambitious man will scarcely call his heart,
A simple fool's adorns thy bottom-hole,
My lov'd old friend, oh do not let us part.
Of wind and wet, we've had an even share,
Have heavily felt life's pleasure and its pain,
Joy reigning now, and now succeeding care,
An equal part of sunshine and of rain.
For long, with me, life's fire-fish down must end,
The time will stop the beatings of this heart,
Oh, wait a while for me, my good old friend,
My lov'd old friend, oh do not let us part.

LAPON.

ANACDOTE.—The New York Sun tells a good anecdote of a Nantucket fisherman. It is the boast of the hardy fishermen and coasters of the North that they can tell where shoals they are, without any instrument but the lead, and with no other observation than a scrutiny of the sand brought from the bottom upon it. A few years ago one Captain Bunker was on a cruise, and being confined to his cabin by sickness, he directed that the lead should be brought down to his berth for his inspection. The craft belonged to Nantucket and was in sand ballast. The mate of the vessel, somewhat of a wag and doubter of the Captain's infallibility, greased the lead and dropped it on the ballast, carried it down to the berth. Old Captain Bunker's eyes dilated with astonishment, so he asked, "Do you say you got this sand by sounding?"

"Yes sir."

"Then by —— Nantucket's sunk, and we are right over Tupper's Hill!"

The mate went on deck.

RUNNING A MUCK.—Beatley's Miscellany tells the following strange story of the Malays:—

"Only one way is thought, by the religious Malay, to lead straight to Heaven, and on this he resolves; he dedicates his prayers, performs his ablutions, and prepares to "run a muck." The family who thus determines, for, vows to his God to destroy every living thing he may meet on his path; throws another, but one relationship, to turn neither to the right nor to the left, but to sacrifice all indiscriminately, till he himself is turn he sacrificed. He first proceeds to oil his body all over, to elude capture as long as possible, for the more victims he makes the more certain is his road to heaven. He casts off every thing that may be caught at; shaves his head, lest he should be seized by the hair; takes a very large portion of opium or some other maddening poison, then armed himself with a knife or cleaver in either hand, he rushes forth to immolate all he may encounter.

Machine Poetry.

One rainy hen has broke her leg.
Oh! never more she'll lay an egg
The humble cow has gone phish dry.
And never fall has a drop of pie
The moth is fall of sin and sorrow,
We've been to-day and die to-morrow.

THE SELF-NOSED GENTLEMAN.—The Little Rock Ark. Gazette states, that during the great struggle in the last presidential canvass, a young man, who had the misfortune to be formed on the pick-axe plan, was one public day surrounded by a number of hearers, attentively listening to his efforts in electioneering, amongst whom was a plain old farmer who was affected with stammering, who thus accosted the young gentleman:

"Tell me, my friend, did God didn't you come from a rich family?"

"Democratic people do most all well provided for. Why do ask?"

"Because the scriptures say that the rich grind the faces of the poor, and I see they have got your nose to grind upon."

The sharp-nosed gentleman left.

A BEGGAR WORTH KNOWING.—I was one of those gentlemen to myself once; and I brought myself to a fine pass with my classmates. Thus was, I married a young and [illegible] woman without a farthing; and I kept the marriage secret but I soon found out, nevertheless, that my father disinherited me; that [illegible] to keep the secret, but it [illegible] blew all over the town. When my [illegible] came to find out, and [illegible] to be [illegible]. Neighbors, I say, I dare of a broken heart—having kept that all a long a profound secret. Then I fell into extreme poverty, and all my friends left me; for that is a secret. Never to confide—for harbor secrets. But a secret worth knowing."

PETE GOSSIP'S LAST.—"Look hen, nigger," said Pete, yesterday, to his chum, Sam Jonsing—"I wants to ask you a question; or, in oder words, gib you a conundrum.

"Well," replied Sam, "what you gwine to ask—let hab 'em.

"Yaw! yaw!" chuckled Pete, as he gave a knowing wink, and said—"You wouldn't pressman dar, what I gib my daughter him! Dere live a county in New York. Does you give it up nigger?"

"Yes, sir—yes, I does."

"Why, I gib her to a one-legged—(Oomah.)

Sam sigh'd pitiingly, while Pete, looking after him, called—"By golly! dat nigger don't know nuffin."

Epigram.

To the man the poet tries,
Any reason to Julia's eyes;
He takes a screw—but cruel when,
The screw still remains a screw to him.

SIAMESE TWINS.—A hopeful youth in one of the upper districts of South Carolina, had the good luck to see the Siamese Twins when they were in that State. After gratifying his curiosity by looking at them, he turned to a neighbor and asked, very earnestly, if they were Brothers. His neighbor told him that he thought it quite probable they were. "Well," said he, with an air of profound curiosity, "if just such another pair was to be born in South Carolina, would they be Siamese Twins too?"

QUITE NEAR THE MARK.—Two gentlemen angling in the Thame at Newham lately, could not agree upon the appearance of one of their favorite baits, the horse fly, and they agreed to refer the question to a rustic whom they saw ploughing at a little distance, and accosted him thus—"Did you ever see a horse fly?" "Whoy," said Hodge, with some astonishment, "non, dat a, I never need a horse fly, but I once seed a cow fall down a precipice!"

MEMORY.—How a single word—a single tone—a single look—will sometimes give the key to a mystery. There are moments when conception, awakened we know not how, flashes like lightning through all space, disclosing at once a world that was before all darkness. One single tone will sometimes touch the electric chain of memory, and run, brightening, over a thousand links in the past, which connect that to thoughts of days long gone by.

PARDY'S REPORT.—At the late election at Shaftsbury, an Irishman made his appearance, and happening to say something in the crowd to the candidates, one of the Tory party exclaimed from the hustings—"Oh, Paddy! now go to the devil." "I'm much obliged to your honor," was Paddy's reply. "sure, you are the first gentleman that has invited me to your father's house since my arrival in England."

AFFECTED.—A gentleman passing by the jail of a country town heard one of the prisoners through the gates of his cell, singing, on the softest and most melodious tones, that favorite song—"Home, sweet Home." His sympathies were very much excited in favor of the unfortunate tenant of the dungeon; and upon enquiring the cause of his incarceration, was informed that he was put in jail for breaking his wife.

COOL.—Lieut. Maubourg lost his leg at the battle of Leipsic. After he had suffered amputation with the greatest courage he saw his servant crying, or pretending to cry, in the corner of the room. "Come if your hypocritical tears, you idle dog," said his master; "you know you are very glad, for now you will have only one boot to clean instead of two.

DISTINCT.—"Sambo, do you know dat colored lady?"

"Yes, Cæsar, I do. Wind and weather permitting, she and de nigger will be one dem before de next Christmas."

"Wha' Sambo, den you will hab a great addition to your property."

GOOD ADVICE.—Young man, "marry a woman, flayed less money than you earn, and you will every day grow richer. Never run in debt, and lawyers and constables will have to become furmers.

NOT BAD.—What were the colors of the winds and the waves during the last storm? Ans.—The winds blew and the waves roar.

The Philosophy of Storms.*

(The following article is an able review of Mr. Espy's theory of Storms, taken from a late number of the Merchant's Magazine. Our readers will be interested with the subject, with the manner in which it is treated, and with the solid information it contains. Mr. Espy's theory is well based on facts—are his deductions sound?—*Eds. Post.*)

Franklin was, we believe, the first to discover that our great northeast storms "travel against the wind." A violent rain having set in at Philadelphia, from the northeast, he naturally enough supposed that the storm came from that direction, and was greatly surprised, on consulting the passengers from New York and Boston, to find that it commenced raining at New York several hours after the storm set in at Philadelphia, and that the time of its reaching Boston was still later. The same unusually was also observed by Dr. Mitchell: but it remained for Mr. Redfield, of New York, to establish, by the most satisfactory proofs, the route pursued by these storms. In his papers on this subject he has fully demonstrated that they often originate in the Windward Islands of the West Indies, where they are mostly small and round, and progress in a curve toward the northwest, enlarging as they advance, and at latitude 30 inclining more to the north. Beyond that latitude they are generally more and as far as he has been able to trace them, they pursue a direction more or less toward the east.

Mr. Redfield has also attempted to show that in all our great storms, the wind begins in the form of a whirlwind; and in this he has been followed on the other side of the Atlantic, by Colonel Reid, who has published a volume full of interesting details on the subject, in which he attempts to develop the law of storms by means of facts with a view to practical use in navigation. But neither of these gentlemen, so far as we know, have succeeded in tracing this supposed gyration to its cause, or pointed out the dependence between clouds, winds, hail, and the other phenomena of storms. Mr. Espy has taken a step beyond them, and confidently believes that he has discovered the key which is to unlock all the mysteries of meteorology, and disclose the hidden causes which produce clouds, water spouts, tornadoes, hail spouts, variable winds, and barometric fluctuations.

That result of Dr. Dalton's experiments on the aqueous vapor in the atmosphere, by which its amount in any given space may be determined by means of a glass of water and a thermometer, may be said to constitute the basis of Mr. Espy's theory, and therefore requires a passing notice. If the reader will take a tumbler of water of the same temperature as the air, and drop into it a small piece of ice, he will find, as the water cools, that dew will settle on the outside of the tumbler. The temperature at which this dew begins to form is called the dew point.

The dew on the tumbler is condensed from the air by the cold communicated from the tumbler, and it may also be condensed by the same degree of cold produced in a different way. It is found that air is cooled by expansion produced by diminished pressure, and hence, when the receiver of an air pump is rapidly exhausted, and the air within expands sufficiently to cool it down to the dew point, moisture will make its appearance on the sides of the receiver, and an artificial cloud will appear. Mr. Espy supposes that it is precisely in the same way that clouds are formed in the laboratory of nature.

If a dozen feather beds were piled together one above another, the upper one would be pressed closer than the upper, because they would not only have to sustain their own weight, but also the weight of all those above them. For the same reason the atmosphere which lies upon the surface of the earth, is subjected to much greater pressure than that which is piled up above, and this pressure must gradually decrease as you ascend. It follows that if a current of air be made to pass upward from the surface of the earth, it would be subjected to a constantly decreasing pressure, and would consequently expand: as it expanded it would grow cold, and when it reached the temperature of the dew point, it would begin to condense its vapor into sensible moisture, and thus form a cloud. This process, Mr. Espy contends, takes place constantly in the operations of nature. Certain portions of the air becoming more heated or more highly charged with aqueous vapor than others, are then made specifically lighter, and consequently rise, and when the dew point is high, powerful ascending currents of air are thus generated, which will they are sufficiently expanded by the diminished pressure to which they are subjected to reduce their temperature to the point of forming clouds, when a cloud will begin to appear.

The reduction of temperature which would thus be produced by the expansion of ascending air, Mr. Espy finds by experiment to be about one degree for every one hundred yards of ascent; and hence, if an upsoaring current of air is ever produced in the operations of nature, it is easy to calculate how high it must rise before it begins to condense its vapor into visible cloud. For example, if, in a summer's day, the thermometer stands at 80°, and the dew point at 70°, then air must be cooled 10° before it can begin to condense its vapor into cloud. Consequently, if it cools one degree for every one hundred yards that it rises, then when it attains an elevation of ten hundred yards, it will be cooled down to the point of forming dew, when its vapor will begin to condense, and the base of a forming cloud become immediately visible. The base of all forming clouds in the same neighborhood should therefore be nearly on the same level.

Cloudy air, when known to every chemist that vapor can be condensed into water, without releasing a clearly quantity of caloric, known in technical language as the *caloric of elasticity*, and thus producing a considerable amount of sensible heat. If air be cooled down to the point of forming dew, and then vapor is converted back to water, the caloric (heat) must necessarily be released; and, according to Mr. Espy, its agency in producing wind, rain, hail, barometric fluctuations, and all the sublime and astonishing phenomena which attend our most violent storms, has hitherto been altogether overlooked. He finds, by calculating according to well known chemical laws, that the *caloric of elasticity* released during the condensation of vapor while a cloud is forming, will expand the air in the cloud about eight thousand times for every inch of water of water formed by the process of condensation.

If this is true, and it seems to be placed beyond a doubt, then the air within a cloud is both lighter and warmer than that by which it is surrounded. That it is warmer is proved by actual observation as well as by Mr. Espy's experiments. Summer tells us that when he was enveloped in a cloud on the side of a mountain, his temperature was higher than in the sun; and both Durant and Gay-Lussac note the same fact while passing through clouds in a balloon. The uniform depression of the barometer under large clouds and during all our great storms, would seem also to confirm Espy's other position, and place beyond a doubt the fact that the air in the cloud is warmer, and therefore lighter than the surrounding atmosphere.

If, then, a cloud can be formed by a current of air moving upwards, and the cloud thus formed is lighter than the circumambient air, it necessarily follows that the equilibrium of the atmosphere must be more or less disturbed by every formation of this character. For if a lofty cloud by the evolution of its latent caloric, makes the air within it warmer and lighter, then will the air around it rush from all sides towards its base, and upwards into its centre; and as the wind in its upward course comes under less pressure, it will become gradually colder until it reaches the temperature of the dew point, when it will begin to condense its vapor, thus feeding the cloud with fresh material for its expansion and perpetuity, and consummating by so it were, a self-sustaining power by which it moves on perhaps for days together, as we often behold in the operations of nature, enlarging as it advances, causing high winds wherever it passes, and fertilizing the earth with its refreshing showers.

"When a cloud begins to form an ascending column of air, it will be seen to swell out at the top, assuming successively the appearance of cauliflowers, if the upsoaring current should be driven out of its perpendicular motion by an upper current of air, the clouds which might then form would be ragged and irregular, and called broken cumuli. These will always be higher than the base of cumuli, but much lower than cirrus. While the cloud continues to form and swell up above, its base will remain on the same level, for the air below the base has to rise to the same height before it can become cold enough, by diminishing pressure, to begin to condense its vapor into water; this will cause the base to be flat, even after the cloud has acquired great perpendicular height, and assumed the form of a cupola. Other clouds, also, for many miles around, formed by other ascending columns, will assume similar appearances, and will moreover have their base all on the same or nearly the same horizontal level, and the height of these bases from the surface of the earth will be greatest about two o'clock, when the dew point and temperature of the air are the greatest distance apart."

"When upsoaring currents are formed by superior heat, clouds will more frequently begin to form in the morning, increase in number as the heat increases, and cease altogether in the evening, when the surface of the earth becomes cold by radiation. The commencement of upsoaring columns in the morning, will be attended with an increase of wind, and its force will increase with the increasing columns, both keeping pace with the ascending temperature. This increase of wind is produced partly by the rush of air on all sides at the surface of the earth towards the centre of the ascending column, partly by the diminished pressure, and partly by the depression of air all round the ascending column, causing down a rush of the motion which it has above, which is found to be greater than that which the air has in common with the superior of the earth's surface. The rapid disturbance of equilibrium, which is produced by one ascending column, will tend to form others in its neighborhood; for, the air being retarded on the windward side, will form other ascending columns, and these will form other small, and so the process will be continued."

But, it may be asked, if the air in a cloud is lighter than that which surrounds it, and is consequently possessed of a self-sustaining principle, why all forming clouds do not ascend till they produce rain? We shall answer this question by another quotation from Mr. Espy's book. In his introduction, on page 19, he says:—"Neither can clouds form of any very great size, when there are cross currents of air sufficiently strong to break in two an ascending current, for the successional power of the upsoaring current will thus be weakened and destroyed. Immediately after a great rain, too, when the upper air has yet in it a large quantity of caloric, which it received from the condensation of the vapor, the upsoaring columns which may then occur, on reaching this upper stratum, will not continue their motion in it far, from the want of buoyancy; therefore, they will not produce rain, nor clouds of any kind, but broken cumuli. Besides, as the air at some distance above the surface of the earth, and below the base of the cloud, is sometimes very dry, and as much of this air goes in below the base of the cloud and up with the ascending columns, large portions of the air in the cloud may thus not be saturated with vapor, and, of course, rain in this case will not be produced. These are some of the means contrived by nature to prevent upsoaring columns from increasing until rain is produced. Without some such contrivances, it is probable that every upsoaring column which should begin to form cloud when the dew point is favorable, would produce rain, for as soon as the cloud forms, the upsoaring power is rapidly increased by the evolution of the caloric of elasticity."

The cloud which produces water-spouts, hailspouts, and tornadoes, differs somewhat from other clouds, and can be formed only when the dew point is very high, the atmosphere devoid of cross currents, and the air in the neighborhood comparatively quiet, or rather, moving in the direction of the upsoaring current above. When these circumstances concur, and a cloud begins to form by an ascending column, there is nothing to prevent its rapid generation, and it shoots upwards to a vast height, while it occupies only a small space in a lateral direction. The effects which follow the generation of such a cloud, must necessarily be more or less violent, because the whole force of the cloud is spent on a very small space. Extending upwards to a great height, and being lighter than the surrounding atmosphere, it takes off from the air below much of its accustomed pressure, and the wind consequently presses in towards it from all sides, and rushes up to the cloud itself with fearful velocity, carrying with it all light substances, uprooting trees, hurling off the roofs of houses, barns, and other buildings, and sometimes lifting into the air large timber, animals, and in one instance which we recollect, a cart load of potatoes.

As the cloud is small in circumference, and is moved forward with considerable velocity by the main current in the higher region of the atmosphere, its progress brings it suddenly over the place which is to be the scene of its devastation; the accustomed pressure of the atmosphere is removed almost instantaneously; the barometer falls nearly ten inches in two inches in the course of a few minutes, and the effect is analogous to that of an explosion. H. Tooley, who communicated to the Secretary of the Albany Institute an account of the Watertown tornado, which took place on the 7th of May, 1840, has called particular attention to this last mentioned circumstance, and cited the following strong cases.

"1. A brick street of a brick house occupied by Thomas Arnut, Esq., as an office, was closely shut up, both ends bursted outward, and such was the force of the explosive power, that some of the brick of the windward end were driven across a terrace nearly on a level with the end, and at a distance of not less than twenty feet in the face of the storm.

"2. A brick house on the north side of Main street, belonging to John Fletcher, had the leeward gable end thrown out, the windward end remaining unimpaired.

"3. The windward gable end of a large house adjoining the Commercial Bank, bursted outward against the face of the storm; the leeward end was unimpaired.

"4. The gable ends of a large three story brick house on Franklin street, owned by Rowan and Cartwright, were thrown outward with great force.

"5. The front ends (leeward to the storm) of two brick stores owned by Eli Montgomery, were thrown outward with great force, the windward ends being uninjured.

"6. Another large brick house, near the last mentioned, owned by Watt, Burke & Co., had the leeward end alone bursted out.

"7. Another brick house adjoining the last mentioned, had the windward gable end thrown outward.

"8. The Theatre, a large brick building, had the entire roof blown off and thrown some ten feet forward, and the walls demolished.

"9. The leeward walls of two front rooms of the Tremont House on Well street, were thrown outward with great force, without destroying or moving the furniture thereon, and where the storm could have no access.

"10. The roof of the fire-proof brick office of the Bank of Utica, exploded to the windward, that side, it is presumed, being the weakest.

"11. The gable ends of a large brick store on Main and Pearl streets, where thrown outward with great force.

"12. The southern side, and the northern and western gable ends of the brick insurance buildings on Pearl and Market streets, were thrown outward in such manner as to nearly demolish the building.

"13. The roof of Dr. Merrill's house on State-street was saved by the explosive power bursting open a large trap door in the roof, thereby making an outlet for the enclosed air.

"14. The leeward wall of a new wooden house owned by Rhum Parker, on Washington street, was thrown outward by the explosive power, the windward side and remaining unbroken excepting place of the windows.

Professor Johnson in his description of the New Brunswick tornado, which occurred on the 19th of June, 1835, has called attention to the same circumstance, and has shown that it was not confined to the ridge of a building lay in a northerly and southerly position, the eastern slope of roof was observed to be removed, or at least stripped of its shingles, while the western slope remained entire. Many buildings were likewise observed with holes in their roofs, whether shingled or tiled, but otherwise not much damaged, unless by the demolition of walls. In the case in which it was demonstrated the strong upward tendency of the forces by which they were produced, while the half untouched houses, already mentioned, prove that the resultant of all the forces in nature at the place was not in a perpendicular to the horizon, but inclined to the east. Such a roof would apply to the western slope of the roof some counteracting tendency, or rather would not only perpendicular, but upward pressure. Had there been no other facts to show the powerful rushing of currents upward, the above would, it is conceived, have been sufficient to settle the question, but taken in connection with the circumstances that have been mentioned, they carried to a great height, and their fragments distributed over a large extent along the subsequent path of the storm, that beds and other furniture were taken out of the upper stories of well ordered houses, and there wonderfully from their feet or dashed *sparers* against walls; and that in one instance, a lad of eight or nine years old, was carried upward and onward with the wind, a distance of several hundred yards, and particularly that he afterward descended in safety, being preserved from a violent fall by the upward forces, within the range of which he still continued. In connection with these and similar facts, it seems impossible to doubt that the greatest violence of action was in an upward and easterly direction.

If these surprising results, which have been long the subject of observation, are so easily accounted for on the principles laid down by Mr. Espy, we shall see at all other phenomena of these wonderful storms. We often hear of sticks, grass, sand, &c., frozen in the hail which falls from one of these clouds, and the curious fact has given rise to much speculation. The solution is now, however, perfectly simple. The current of ascending air which dashes with such fearful velocity upward into the cloud, and carries with it these lighter substances from the earth, also carries up the water which has been condensed from the saturated air, and throwing all out together at the side of the cloud in the region of congelation, they are frozen together in the form of hail, and descend in their own gravity to the earth. Large sheets of water may also be thrown out and frozen in the same way, which breaking in their fall, will account for the great hail stones and "pieces of ice" spoken of by Reid, and which fell at Salisbury, and for the "pieces of ice" of almost every form which fell during the passage of the Orkney quoal in 1818.

Again it is not uncommon for rain and hail to fall from one of these clouds in two distinct veins. Mrs. Tillinghast of Providence, during the passage of the tornado of 1838, saw two showers descending from the cloud, both of which dipped inward towards the spout which hung from the centre of the cloud below; and M. Pouillet has given an account of a hail storm which travelled from the Pyrenees to the Baltic, in 1788, leaving two veins of hail about fifteen miles apart, in which space there was a great rain. The eastern vein was about seven miles in width; the western about twelve, and on the outside of both was also a strip of rain. The progress of the hail at the place of which he has adopted, and which governs him in the control of his vessel when the element on which he is to be directed commences. If the course which storms pursue may be known, and it be true that the wind drives in on all sides toward a common centre, the contrary bearing would be for landing which, if generally known, would greatly lessen the perilous operations of pilots, and the fatigue of the sailor. We have now established, by a fair deduction, that there was a powerful current of air from the opposite point of the compass towards some point in the centre of the track, and that here there was also a powerful current upward."

Professor Olmsted, of Yale College, in his account of the New Haven tornado, which occurred on the 31st of July, 1839, says:—"The great fact that strikes us, is, that all the trees and other objects that mark the direction of the wind which passed over this place, are, with a very few exceptions, turned towards on both sides towards the centre of the track; while near the centre, the direction of the prostrate bodies is consistent with that of the storm."

Professor Forshay in his account of the Natchez tornado is equally in point. He declares that "the nearer the axis of the tornado, the nearer were these bearings parallel with that axis, and the more distant, the more perpendicular to the axis, and point to the direction from which the storm came, or cross a line perpendicular to the axis, *in beneath* those that point in the forward direction of the storm."

We may mention also, that the storm which occurred in France, of which we have given a chart in the former part of this article, could not possibly have been of the whirlwind character. Had the wind moved in a whirl, the hail which fell during its progress, must have been scattered over the whole area of the storm, and not been deposited in two veins for many miles as we have seen. If the whirlwind theory is correct, therefore, this storm at least must have been a wonderful exception to the general law.

But Mr. Espy does not rely alone on the direction of fallen trees in tornadoes to prove the controlling power of the wind in storms. By means of a series of observations, he has been enabled to surround some of our great northern storms, and has satisfied himself that the same law uniformly prevails. We can only make a few selections from the great mass which we find recorded in the volume before us.

A destructive storm swept along our southern coast in the middle of August, 1837. The facts respecting it were collected by Col. Reid, but Mr. Espy finds that they manifest his own views, although recorded by an advocate of the whirlwind theory.

On entrance at noon of the 18th of August, 1837, the ship, Duke of Manchester was only a few miles N. E. of the centre of the storm; for some time in the afternoon, the centre of the storm passed nearly over the vessel, and she experienced the calm of S. W. At this time, and for some seven or eight hours both before and after, all those ships which were laboring in the most violent part of the storm, had the wind blowing toward a central space of no great magnitude. This settles the question of violent centripetal motion of the wind in the storm, in conformity with the five previously examined, and also with the twelve investigated by the Joint Committee of the American Philosophical Society and Franklin Institute, and with not less than fourteen land spouts which have already been examined, in all of which the trees were thrown with their tops inward—and when they are thrown across each other, those which are underneath, are uniformly found to be thrown inwards and backwards, just as they should be, if the wind on each side is in a direct centripetal direction. If the cause
